Divisibility tests for 4 and 8

Task A: Divisibility tests for 4

1) Identify the multiples of 4 from the lists:

a) 378, 8940, 93 424, 9288

b) 32 980, 8 430 348, 3 490 085, 2 222 222

2) Identify the multiples of 4 and 5 from the list below:

92 980, 4 300 360, 3 490 085, 2 222 440

3) Identify if the statements are sometimes, always or never true.

Statement	Sometimes	Always	Never
A multiple of 4 is a multiple of 2		✓	
A multiple of 2 is a multiple of 4	✓		
A multiple of 10 is a multiple of 2		✓	
A multiple of 9 is a multiple of 3		✓	
A multiple of 8 is odd			✓
Multiples of 40 are multiples of 5, 8 and 10		✓	

Task B: Divisibility tests for 8

1) Circle all the multiples of 8

4839 38 409 3284 84 032

4384 11 902 20 484 56 870 888

80 000 000 000

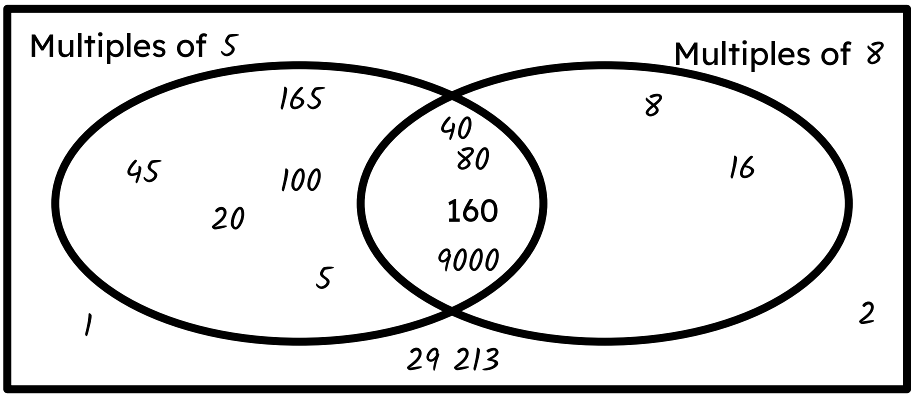
2) All the multiples of 2 and 3 are multiples of 6.
All the multiples of 3 and 5 are multiples of 15.
Explain why all the multiples of 2 and 8 are not all multiples of 16.

2 is a factor or 8 so this means all multiples of 2 and 8 are multiples of 8.

3) Fill in the missing information. Some have been done for you.

1 2 5 8 16 20 40 45 80

100 160 165 29 213 9000



4) You are playing a board game.

A multiple of 5 can move 2 right.
A multiple of 3 can move 3 up.
A multiple of 8 can move 4 left.
A multiple of 11 can move 1 left or right.

a) Which starting number do you choose? *3*

b) Draw your path to win the game in as few moves as possible.

c) Design your own game using multiples of 2, 3, 4, 6, 8, 9 or 10

11	11	88	55	88	EXIT
99	33	66	11	4	33
44	99	66	66	8	66
125	100	455	10	639	99
1[illegible]	66	33	22	22	55
23	66	44	77	55	100
333	2[illegible]	13	11	440	77
	Start 1	Start 2		Start 3
