Equivalent multiplicative relationships

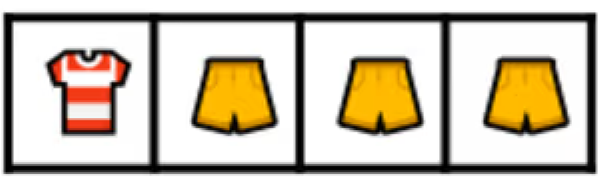
1 How many equivalent ratios are there to "For every 1 apple, there are 2 bananas."? Tick **1** correct answer

- ☐ 24
- ☐ 16
- ☐ 1
- ☐ infinite
- ☐ 1000

2 Select the equivalent ratios to "For every 10 stars, there are 2 moons." Tick **3** correct answers

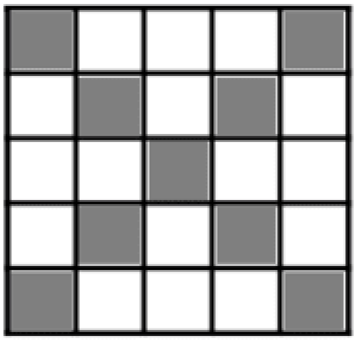
- ☐ For every 5 stars, there is 1 moon.
- ☐ For every 20 stars, there are 4 moons.
- ☐ For every 25 stars, there are 5 moons.
- ☐ For every 2 stars, there are 0.1 moons.
- ☐ For every 8 stars, there are 4 moons.

3 What is the equivalent ratio for this? Tick **2** correct answers



- ☐ For every 1 pair of shorts, there are 3 t-shirts.
- ☐ For every 1 t-shirt, there are 3 pairs of shorts.
- ☐ For every 5 t-shirts, there are 15 pairs of shorts.
- ☐ For every 4 t-shirts, there are 5 pairs of shorts.

4 What is the ratio of shaded to not shaded? Tick **1** correct answer



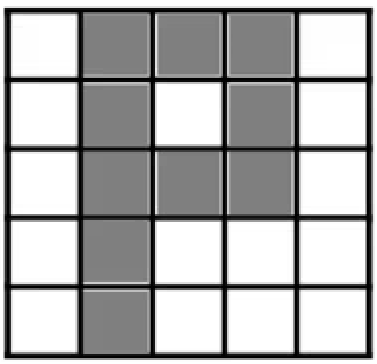
☐ For every 9 shaded, there are 16 not shaded.

☐ For every 3 shaded, there are 2 not shaded.

☐ For every 2 shaded, there are 3 not shaded.

☐ For every 1 shaded, there is 1 not shaded.

5 What is the ratio of shaded to not shaded? Tick **2** correct answers



☐ For every 10 shaded, there are 15 not shaded.

☐ For every 2 shaded, there are 5 not shaded.

☐ For every 2 shaded, there are 3 not shaded.

☐ For every 3 shaded, there are 2 not shaded.

6 Three pieces of wood are cut so that length of piece A × 3 = length of piece B, length of piece B × 2 = length of piece C. Find the length of piece C in cm if the total length of all 3 pieces is 65 cm Fill in the blank
