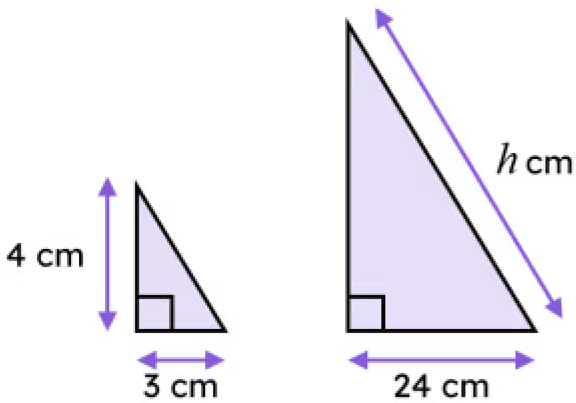
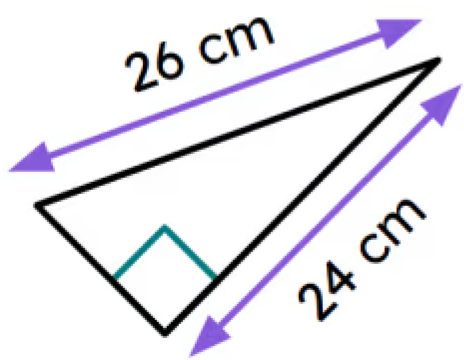
Problem solving with similarity and Pythagoras' theorem

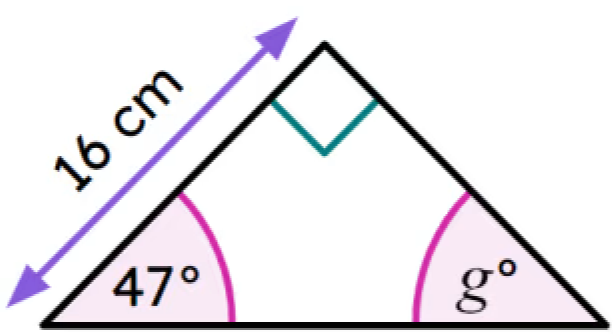
1 These two triangles are similar to each other and are both in the same orientation. The length of the hypotenuse marked h is ____________ cm. Fill in the blank



2 The area of this triangle is ____________ cm². Fill in the blank

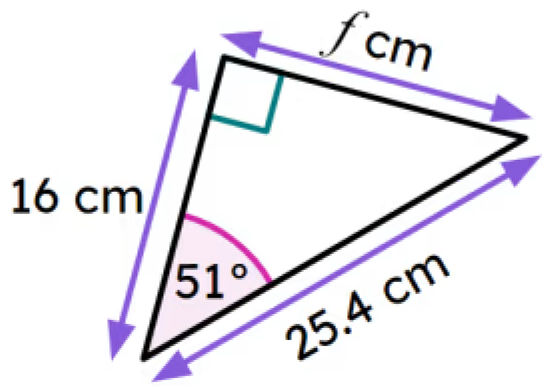


3 Which of these statements are correct for this triangle? Tick **2** correct answers



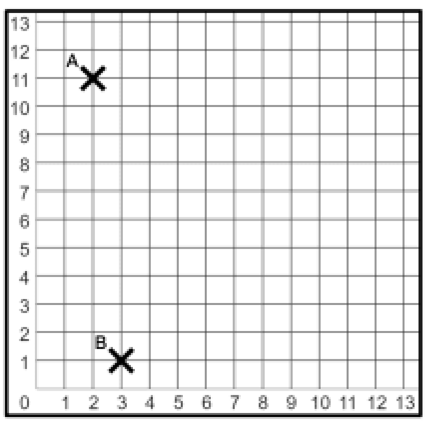
- ☐ You need to use Pythagoras' theorem to find the size of angle g.
- ☐ You do not need to use Pythagoras' theorem to find the size of angle g.
- ☐ $g° = 27°$
- ☐ $g° = 43°$
- ☐ $g° = 47°$

4 Which of these statements are correct for this triangle? Tick **2** correct answers



- [ ] The perimeter of this triangle is 16 + 25.4 + 19.7 = 61.1 cm (to 1 d.p.).
- [ ] The perimeter of this triangle is 16 + 25.4 + 25.4 = 92.4 cm (to 1 d.p.).
- [ ] The area of this triangle is 158 cm² (to the nearest cm²).
- [ ] The area of this triangle is 203.2 cm² (to 1 d.p.).
- [ ] f ° = 180° − 90° − 51° = 39°.

5 Each square is 1 unit in length. The shortest distance from point A to point B is ____________________ units (rounded to 2 d.p.). Fill in the blank



6 Point C is at the coordinate (12, 3). The perimeter of a triangle whose vertices are at points A, B, and C is ____________________ units (to the nearest unit). Fill in the blank
