Different types of equations

1 Work out the value of $(-4)^2$. Tick **1** correct answer

- [ ] −16
- [ ] −8
- [ ] −2
- [ ] 8
- [x] 16

2 Which of these is the best description of the gradient of a line? Tick **1** correct answer

- [ ] the x value where the line crosses the x-axis
- [ ] the length of the line
- [ ] the thickness of the line
- [x] the steepness of the line
- [ ] the vertical distance from the origin to the line

3 Select the coordinates that lie on the line $y = 2x - 3$. Tick **2** correct answers

- [ ] (−2, 1)
- [ ] (0, 3)
- [x] (1, −1)
- [x] (4, 5)
- [ ] (5, 4)

4 The table shows values for the equation $y = 5 - 3x$. The missing number is -1. Fill in the blank

x	−2	0	2
y	11	5	?

5 When the equation of a straight line is written in the form $y = mx + c$, (m) is the coefficient of x and represents the *gradient*. Fill in the blank

6 Work out the value of y that satisfies the equation $3x + y = 6(x - 2)$ when $x = 5$. $y =$ 3
Fill in the blank
