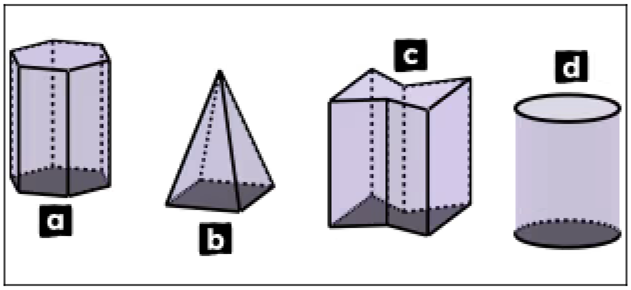
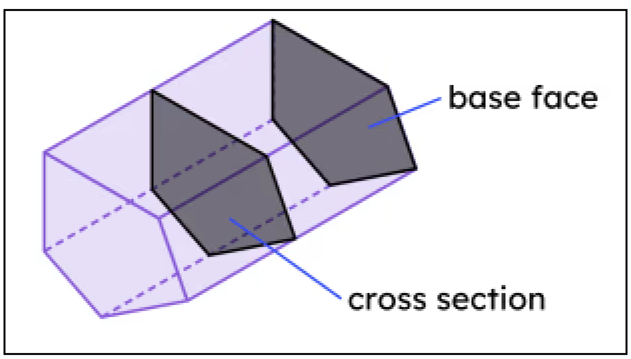
Properties of prisms

1 Which of these 3D shapes are prisms? Tick **2** correct answers



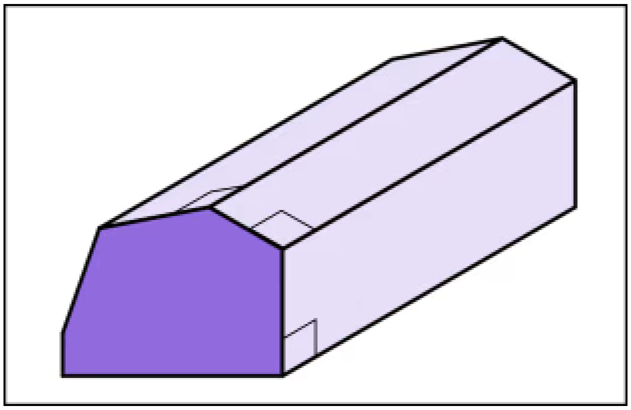
- [x] a
- [ ] b
- [x] c
- [ ] d

2 This 3D shape is a prism. The base face and cross-section shown were used to help identify this shape as a prism. Which of these statements must be true? Tick **2** correct answers



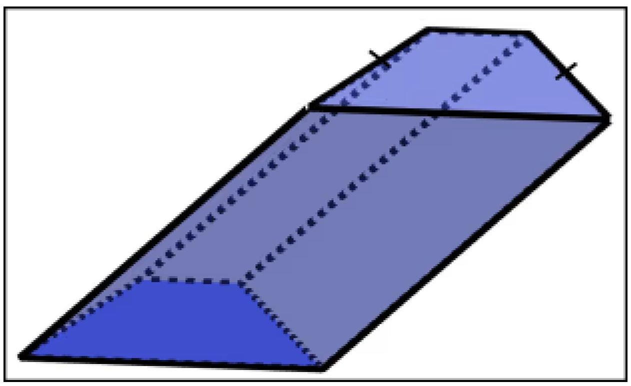
- [x] The base face and cross-section must be parallel to each other.
- [ ] The base face and cross-section must be perpendicular to each other.
- [x] The base face and cross-section must be congruent to each other.
- [ ] The base face and cross-section must be equidistant to each other.
- [ ] The base face and cross-section must both be parallelograms.

3 Which of these names are appropriate for this prism? Tick **3** correct answers



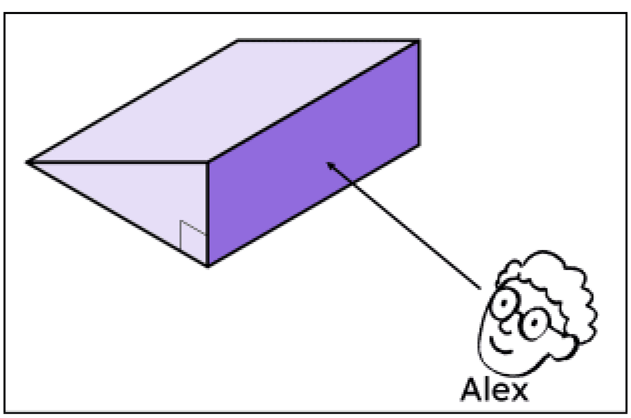
- [ ] isosceles hexagonal prism
- [x] hexagonal prism
- [ ] regular hexagonal prism
- [x] irregular hexagonal prism
- [x] right hexagonal prism

4 Which of these words can used as part of the name of this prism? Tick **3** correct answers



- [ ] right
- [x] oblique
- [ ] parallelogram
- [x] trapezium
- [x] isosceles

5 Alex says: "This prism is a rectangular prism, because this face is a rectangle". Which of these statements is correct? Tick **2** correct answers



- [ ] Alex is correct because parallel cross-sections to this face are all rectangles.
- [x] Alex is incorrect because this is not the face that is the cross-sectional base.
- [x] This prism is a right angled triangular prism.
- [ ] This prism is definitely a right prism because there is a right angle.

6 Match each property of an octagonal prism to its value. Write the correct letter in each box

a	number of vertices
b	number of edges
c	number of parallelogram faces
d	number of octagonal faces
e	number of total faces

d	2
a	16
c	8
b	24
e	10
