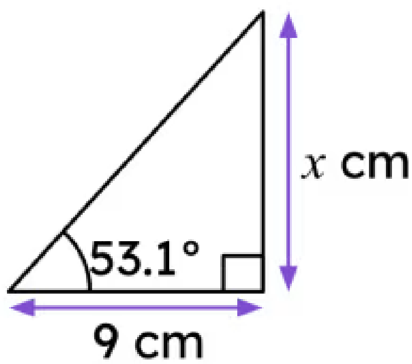
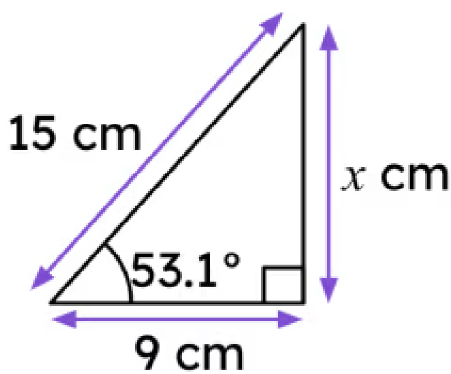
Choosing the right trigonometric ratio

1 Tick which approaches could be used to find x without finding further sides or angles given the information provided in the diagram. (Tick **1** correct answer)



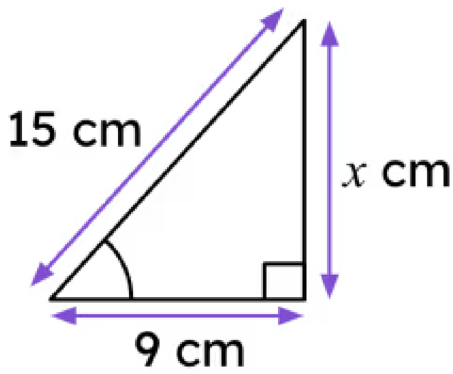
- ☐ $a^2 + b^2 = c^2$
- ☐ There is not enough information to solve this problem.
- ☐ $\sin(\theta) = \frac{\text{opp}}{\text{hyp}}$
- ☐ $\cos(\theta) = \frac{\text{adj}}{\text{hyp}}$
- ☐ $\tan(\theta) = \frac{\text{opp}}{\text{adj}}$

2 Tick which approaches could be used to find x given the information provided in the diagram. (Tick **3** correct answers)



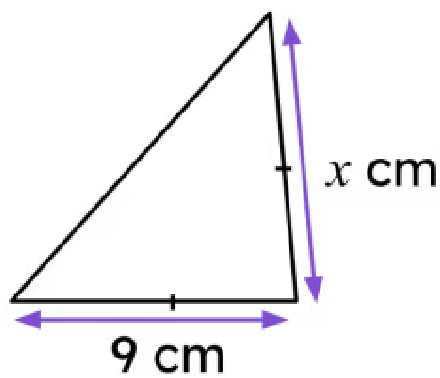
- ☐ $a^2 + b^2 = c^2$
- ☐ There is not enough information to solve this problem.
- ☐ $\sin(\theta) = \frac{\text{opp}}{\text{hyp}}$
- ☐ $\cos(\theta) = \frac{\text{adj}}{\text{hyp}}$
- ☐ $\tan(\theta) = \frac{\text{opp}}{\text{adj}}$

3 Tick which approaches could be used to find x without finding more angles and given the information provided in the diagram. (Tick **1** correct answer)



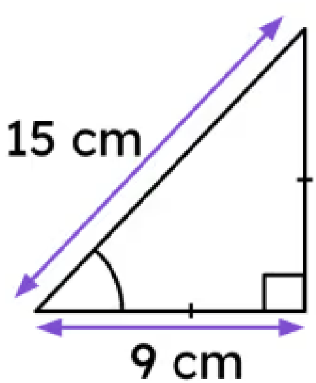
- ☐ $a^2 + b^2 = c^2$
- ☐ There is not enough information to solve this problem.
- ☐ $\sin(\theta) = \frac{\text{opp}}{\text{hyp}}$
- ☐ $\cos(\theta) = \frac{\text{adj}}{\text{hyp}}$
- ☐ $\tan(\theta) = \frac{\text{opp}}{\text{adj}}$

4 Tick which approaches could be used to find x given the information provided in the diagram. (Tick **1** correct answer)



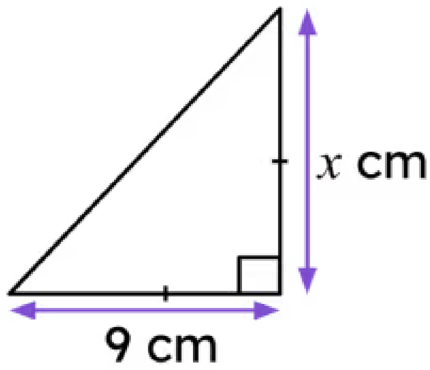
- ☐ $a^2 + b^2 = c^2$
- ☐ Basic properties of triangles
- ☐ $\sin(\theta) = \frac{\text{opp}}{\text{hyp}}$
- ☐ $\cos(\theta) = \frac{\text{adj}}{\text{hyp}}$
- ☐ $\tan(\theta) = \frac{\text{opp}}{\text{adj}}$

5 Tick which approaches could be used to find the angle without finding the remaining side, given the information provided in the diagram. (Tick **2** correct answers)



- ☐ $a^2 + b^2 = c^2$
- ☐ Basic properties of triangles
- ☐ $\sin(\theta) = \frac{\text{opp}}{\text{hyp}}$
- ☐ $\cos(\theta) = \frac{\text{adj}}{\text{hyp}}$
- ☐ $\tan(\theta) = \frac{\text{opp}}{\text{adj}}$

6 Tick which approach is the simplest to find x given the information provided in the diagram. (Tick **1** correct answer)



- ☐ $a^2 + b^2 = c^2$
- ☐ Basic properties of triangles
- ☐ $\sin(\theta) = \frac{\text{opp}}{\text{hyp}}$
- ☐ $\cos(\theta) = \frac{\text{adj}}{\text{hyp}}$
- ☐ $\tan(\theta) = \frac{\text{opp}}{\text{adj}}$
