Brackets in equations

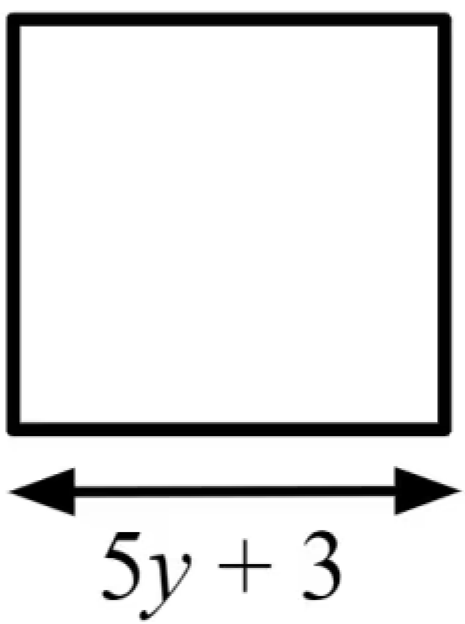
1 Turning the expression $5(y - 2)$ into $5y - 10$ is known as ________________ the brackets. Tick **2** correct answers

- [x] multiplying out
- [ ] erasing
- [ ] factorising
- [x] expanding

2 $2(x + 4)$ and $2x + 4$ are the equivalent expressions. True or false? Tick **1** correct answer

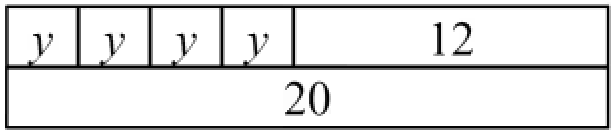
- [ ] True. There is a 2, an x, and a $+4$. That means they are the same.
- [x] False. 2 lots of $(x + 4)$ is $(x + 4) + (x + 4)$ which is $2x + 8$ not $2x + 4$
- [ ] You cannot know until you know the value of x.

3 Which of these are expressions for the perimeter of this square? Tick **2** correct answers



- [ ] $5y + 3$
- [ ] $4 \times 5y + 3$
- [x] $4(5y + 3)$
- [ ] $20y + 3$
- [x] $20y + 12$

4 What equation does this bar model represent? Tick **1** correct answer



- [ ] $4y = 12$
- [ ] $4y = 20$
- [x] $4y + 12 = 20$
- [ ] $4y + 20 = 12$
- [ ] $4(y + 12) = 20$

5 Expand $7(y + 8)$. Tick **1** correct answer

- [ ] $7y + 8$
- [ ] $7y + 15$
- [x] $7y + 56$
- [ ] $y + 56$

6 Expand $-7(y + 8)$. Tick **1** correct answer

- [ ] $7y - 56$
- [x] $-7y - 56$
- [ ] $-7y + 56$
- [ ] $7y + 56$
