Answers

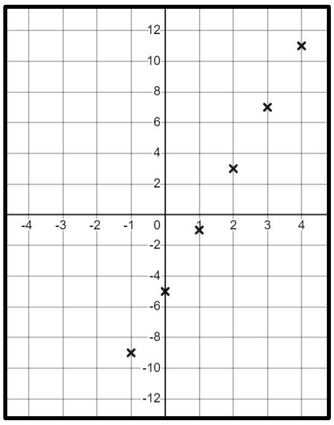
Different types of equations

Task A: Reviewing plotting graphs

1) Fill in the table of values, plot the points for the graphs of each expression.

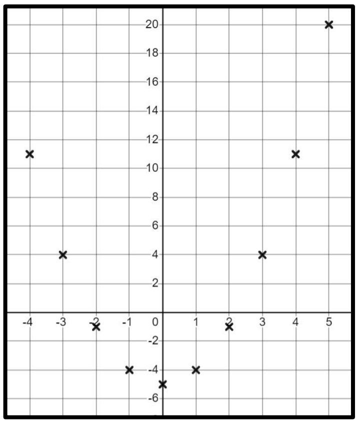
a) $4a - 5$

a	−1	0	1	2	3	4
$4a - 5$	−9	−5	−1	3	7	11



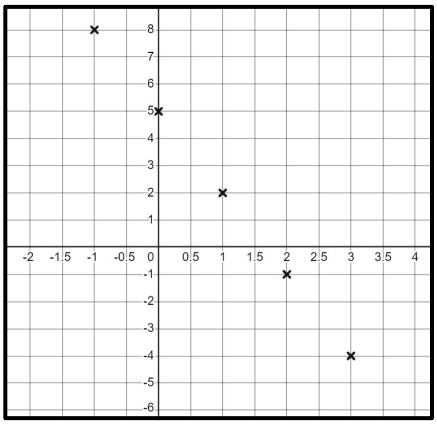
b) $a^2 - 5$

a	−2	−1	0	1	2	3	4
$a^2 - 5$	−1	−4	−5	−4	−1	4	11



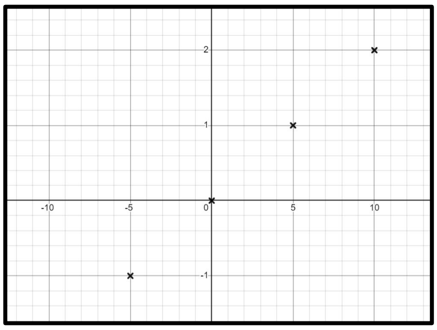
c) $5 - 3a$

a	−1	0	1	2	3	4
$5 - 3a$	8	5	2	−1	−4	−7



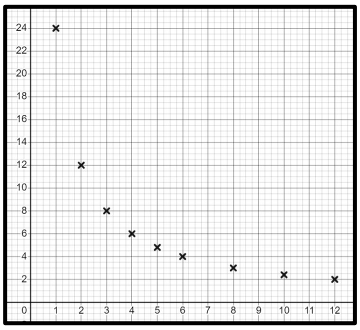
d) $\frac{b}{5}$

b	−10	−5	0	5	10
$\frac{b}{5}$	−2	−1	0	1	2



e) $\frac{24}{x}$

x	1	2	3	4	5	6	..8	..10	..12
$\frac{24}{x}$	24	12	8	6	4.8	4	3	2.4	2



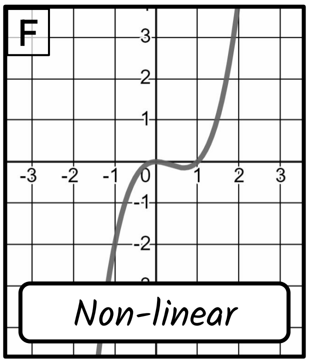
Task B: Identifying linear equations from graphs

1) Fill in the missing values in the tables. Using these, match the equations to the graphs and state whether each equation is linear or not.

A

$$y = x^3 - x^2$$

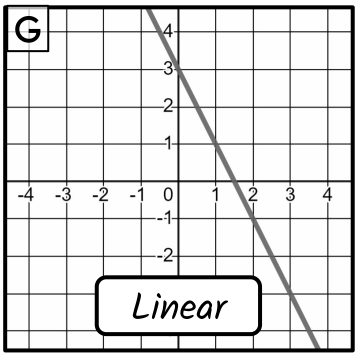
x	-2	-1	1	2
y	-12	-2	0	4



B

$$3 - 2x = y$$

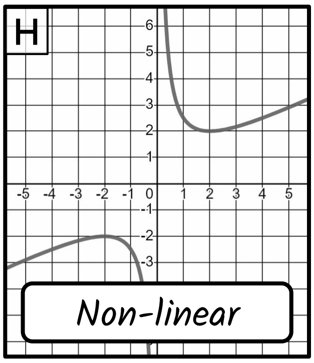
x	-2	-1	1	2
y	7	5	1	-1



C

$$y = \frac{2}{x} + \frac{x}{2}$$

x	-2	-1	1	2
y	-2	-2.5	2.5	2



D

$$2x + y = 6 + 3(x - 2)$$

x	-2	-1	1	2
y	-2	-1	1	2
