Solving linear equations where brackets are used

1 $\frac{3}{2}$ is the ____________________ of $\frac{2}{3}$. Tick **1** correct answer

- [ ] opposite
- [ ] fraction
- [x] reciprocal
- [ ] product

2 Expand $7(2x - 3)$. Tick **1** correct answer

- [ ] $7x - 21$
- [ ] $14x - 3$
- [x] $14x - 21$
- [ ] $14x + 21$
- [ ] $-14x - 21$

3 Expand $\frac{1}{5}(10x - 25)$. Tick **1** correct answer

- [ ] $50x - 125$
- [ ] $50x + 125$
- [ ] $2x - 25$
- [ ] $2x + 25$
- [x] $2x - 5$

4 The solution to $8y + 20 = 4$ is $y =$ <u>-2</u>. Fill in the blank

5 Solve $7x - 3 = 2x + 12$. Tick **1** correct answer

- [x] $x = 3$
- [ ] $x = 2$
- [ ] $x = -2$
- [ ] $x = -3$

6 Solve $7x - 3 = 2x + 11$. Tick **1** correct answer

- [ ] $\frac{5}{14}$
- [ ] $\frac{5}{8}$
- [ ] $\frac{8}{5}$
- [x] $\frac{14}{5}$
