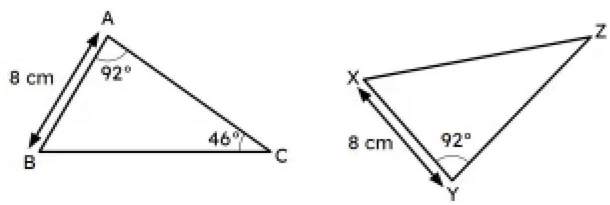
Congruent triangles (ASA and AAS)

1 The criteria ASA (angle-side-angle) and AAS (angle-angle-side) are equivalent. True or false? Tick **1** correct answer

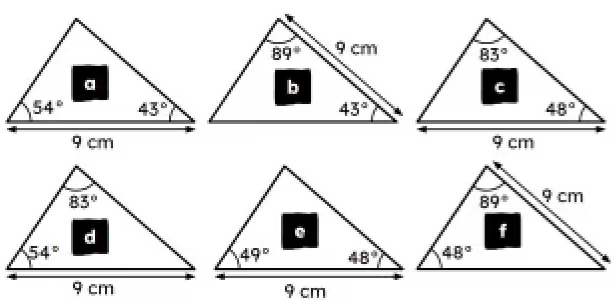
- [x] True - if you know two angles in a triangle then you can calculate the third.
- [ ] False - one is where you know the side between two angles and the other isn't.

2 Triangle ABC and triangle XYZ are congruent by AAS/ASA. Which angle in triangle XYZ is 46°? Tick **1** correct answer



- [ ] $\angle$YXZ
- [x] $\angle$XZY
- [ ] It doesn't matter

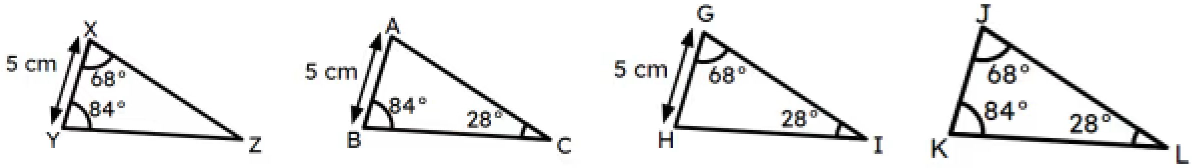
3 Match each triangle on the top row to the triangle on the bottom row that it is congruent to. Write the correct letter in each box



a	a
b	b
c	c

b	f
a	d
c	e

4 Which of the following triangles is not guaranteed to be congruent to the other three triangles? Tick **1** correct answer



- [ ]
- [ ]
- [ ]
- [x]

5 Which of these quadrilaterals can be split into two congruent triangles using one diagonal? Tick **4** correct answers

- [x] square
- [x] rectangle
- [x] kite
- [ ] trapezium
- [x] parallelogram

6 Complete this congruence proof. $\angle ABD = \angle BDC$ as they are given in the diagram, BD is a shared edge and $\angle ADB = \angle DBC$ as they are equal *alternate* angles, so triangle ABD and BDC are congruent by SAS. Fill in the blank
