Name: ____________________________ Starter quiz

Justifying terms of a sequence

1 The calculation 6(20) - 8 would find the 20^{th} ____________________ of the sequence $6\mathrm{n} - 8$. Fill in the blank

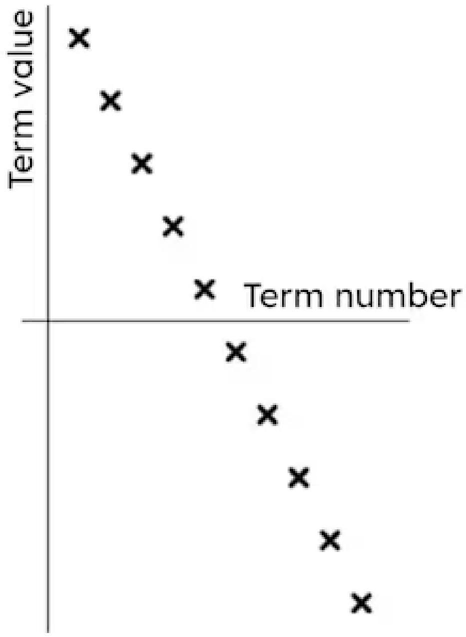
2 Which of these describe features of the sequence $5\mathrm{n} - 9$? Tick **3** correct answers

- [ ] It has a constant difference of +5
- [ ] It decreases by 9 each time
- [ ] The terms always end in the digits 1 or 6
- [ ] The positive terms always end in the digits 1 or 6
- [ ] It starts at -4

3 What is the 75^{th} term of the sequence $6\mathrm{n} - 17$? Tick **1** correct answer

- [ ] 675 - 17 = 658
- [ ] 6 + (75) - 17=64
- [ ] 6(75) - 17 = 450 - 17 = 433
- [ ] (6 - 17)75 = -11 × 75 = -825

4 What happens when you plot an arithmetic sequence? Tick **2** correct answers



- [ ] You get a straight line of values.
- [ ] You get a decreasing pattern of values.
- [ ] You get a curve.
- [ ] You might see points in two quadrants.
- [ ] You might plot points in all four quadrants.

5 Calculate the 200^{th} term of $17.96 - 0.32n$. You may use a calculator. Tick **1** correct answer

- [ ] 81.96
- [ ] 3528
- [ ] -81.96
- [ ] -46.04

6 Put these term values in order of size. Start with the smallest. Use numbers to show the correct order

	The 95^{th} term of the sequence $5n - 11$
	The 80^{th} term of the sequence $6n - 35$
	The 60^{th} term of the sequence $9n - 88$
	The 50^{th} term of the sequence $9n + 19$
	The 50^{th} term of the sequence $596 - 3n$
