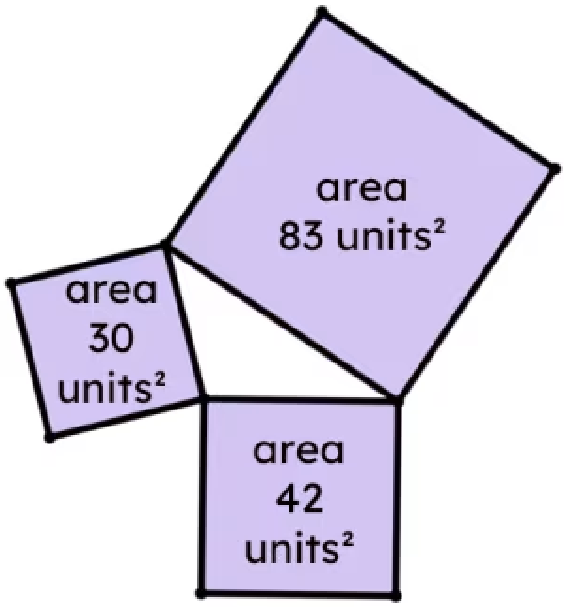
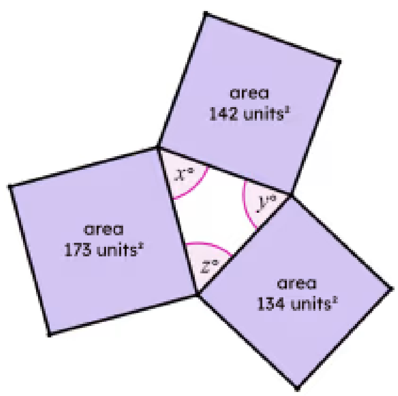
Demonstrating Pythagoras' theorem

1 What is the size of the largest angle in the triangle formed from these three squares? (Tick **1** correct answer)



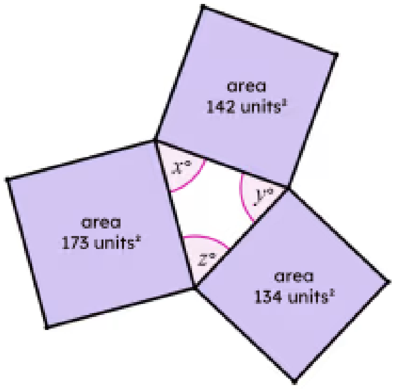
- [ ] acute
- [ ] obtuse
- [ ] reflex
- [ ] right
- [ ] impossible to tell

2 Which of these three angles is the largest? (Tick **1** correct answer)



- [ ] $x°$
- [ ] $y°$
- [ ] $z°$
- [ ] impossible to tell

3 Which of these are possible sizes for the largest angle? (Tick **1** correct answer)



- [ ] 46°
- [ ] 68°
- [ ] 90°
- [ ] 124°
- [ ] 173°

4 If three congruent squares are joined at their vertices, what type of triangle is formed? (Tick **1** correct answer)

- [ ] equilateral
- [ ] isosceles
- [ ] isosceles, right-angled
- [ ] scalene
- [ ] scalene, right-angled

5 Two congruent squares, A and B, and a third square, C, are joined at their vertices. The area of square C is less than the area of square A. What type of triangle is formed? (Tick **1** correct answer)

- [ ] equilateral
- [ ] isosceles
- [ ] isosceles, right-angled
- [ ] scalene
- [ ] scalene, right-angled

6 A right-angled triangle is formed from three squares. The area of two of the squares are 50 units² and 70 units². What are the possible areas of the third square? (Tick **2** correct answers)

- ☐ $\frac{7}{5}$ units²
- ☐ 20 units²
- ☐ 65 units²
- ☐ 120 units²
- ☐ It is impossible for a right-angled triangle to be made from these squares.
