

Securing understanding of multiplication with fractions

Task A: Comparing products

1) Use this fact to answer the following questions:

$$\frac{8}{27} \times \frac{425}{1870} = \frac{340}{5049}$$

a) $\frac{4}{27} \times \frac{425}{1870} = \frac{170}{5049}$

d) $\frac{20}{27} \times \frac{425}{1870} = \frac{850}{5049}$

b) $\frac{16}{27} \times \frac{425}{1870} = \frac{680}{5049}$

e) $\frac{6}{27} \times \frac{425}{1870} = \frac{255}{5049}$

c) $\frac{2}{27} \times \frac{425}{1870} = \frac{85}{5049}$

f) $\frac{22}{27} \times \frac{425}{1870} = \frac{935}{5049}$

2) Without calculating, decide which is the greater product in each pair.

a) $\frac{4}{5} \times \frac{3}{19} = \frac{3}{5} \times \frac{4}{19}$

b) $\frac{3}{8} \times \frac{7}{4} > \frac{4}{7} \times \frac{3}{8}$

c) $\frac{1}{10} \times \frac{1}{9} < \frac{1}{8} \times \frac{1}{10}$

d) Write the six products in order from smallest to largest.

$$\frac{1}{10} \times \frac{1}{9} \quad \frac{1}{8} \times \frac{1}{10} \quad \frac{3}{5} \times \frac{4}{19} = \frac{4}{5} \times \frac{3}{19} \quad \frac{4}{7} \times \frac{3}{8} \quad \frac{3}{8} \times \frac{7}{4}$$

Task B: Multiplying two or more fractions

1) Use the most efficient method to answer these questions.

$$\text{a)} \quad 36 \times \frac{5}{6} \times \frac{4}{5} = 24$$

$$\text{b)} \quad \frac{2}{3} \times 20 \times \frac{1}{4} = 3 \frac{1}{3}$$

$$\text{c)} \quad \frac{7}{10} \times \frac{5}{8} \times \frac{16}{35} = \frac{1}{5}$$

$$\text{d)} \quad \frac{3}{7} \times \frac{4}{9} \times \frac{7}{12} = \frac{1}{9}$$

$$\text{e)} \quad \frac{66}{65} \times \frac{15}{18} = \frac{11}{13}$$

$$\text{f)} \quad \frac{10}{77} \times \frac{21}{55} = \frac{6}{121}$$

$$\text{g)} \quad \frac{21}{154} \times \frac{35}{105} = \frac{1}{22}$$

$$\text{h)} \quad \frac{231}{338} \times \frac{169}{385} = \frac{3}{10}$$
