

Priority of operations with positive integers

- 1 This image is a help guide to the priority of operations. Which set of operations must you always apply first when they are in a calculation? Tick **1** correct answer

- ☐ Addition and subtraction
- ☐ Multiplication and division
- ☐ Roots and exponents
- ☒ Brackets

- 2 How would you complete a calculation when an operation is repeated? Tick **1** correct answer

- ☒ Do them both at the same time
- ☐ Go left to right
- ☐ Ignore them and do those operations last

- 3 Without using a calculator, work out: $4 \times 5 + 6 \times 7 = \underline{62}$ Fill in the blank

- 4 Without using a calculator, work out: $200 - (12 - 8) \times 5 \times 3^2 = \underline{20}$ Fill in the blank

- 5 The answer to this calculation is 54. Match the triangle, star, square and arrow to the correct operation or numerical value. Write the correct letter in each box

$$50 \star \frac{6 \triangle 2^{\uparrow}}{10 \square 4}$$

a	★
b	△
c	□
d	↑

a	+
c	−
b	×
d	2

- 6 Without using a calculator, work out: $90 + \sqrt{40 \times 10} - 12 \times 5 = \underline{50}$ Fill in the blank
