

Priority of operations with positive integers

Task A: Multiplication, division, addition and subtraction

1) Work out the answers to the following. Ensure to show all your working out.

a) $12 + 6 \times 2$

c) $3 \times 10 - 24 \div 8$

b) $100 - 20 \div 5$

2) Sam and Sofia do the same calculation differently. Whos is correct? Explain what they should have done differently.

$$10 + 15 \div 3 \times 4$$

$$10 + \frac{15}{3} \times 4$$

$$10 + 5 \times 4$$

$$10 + 20 = 30$$

Sam

$$10 + 15 \div 3 \times 4$$

$$10 + 15 \div 12$$

$$10 + \frac{15}{12}$$

$$10 + 1.25 = 11.25$$

Sofia

3) Fill in the gaps with +, -, ÷ and × so that the calculations are correct.

a) $4 \square 5 \square 6 \square 7 = 12$

b) $4 \square 5 \square 6 \square 7 = 8$

c) $4 \square 5 \square 6 \square 7 = 62$

d) $4 \square 5 \square 6 \square 7 = 7$

e) $4 \square 5 \square 6 \square 7 = 21$

4) Fill in the gaps with +, -, ÷ and × so that the calculations are correct.

a) $10 \square 2 \square 2 \square 3 = 8$

b) $10 \square 2 \square 15 \square 3 = 10$

c) $10 \square 2 \square 10 \square 2 \square 2 \square 3 = 21$

Task B: Brackets, roots and exponents

1) Work out the answers to the following. Ensure to show your working out.

a) $24 + (6 - 2) \times 3^2$

b) $100 - \sqrt{70 - 6} \div 2^2$

2) Fill in the gaps with +, −, ÷, × and brackets so that the calculations are correct. You can use more than one pair of brackets.

a) $4 \quad 5 \quad 6 \quad 7 = 117$

b) $4 \quad 5 \quad 6 \quad 7 = 308$

c) $4 \quad 5 \quad 6 \quad 7 = 69$

d) $4 \quad 5 \quad 6 \quad 7 = 1$

3) Use exactly four 4s, together with any of the operations ×, ÷, +, √, −, **exponents** (can be any value) and/or **brackets** to write calculations giving answers of: 1, then 2, then 3... up to 20. As an example, 8 has been done for you.
