

Addition of positive and negative integers

Task A: Representing integers using counters

Add counters to make each of the representations correct:

Integer	Representation	Answers e.g.
(-3)		
4		
(-1)		
0		

Task B: Addition of positive and negative integers

Answer the following questions.
Find the answers in the grid and shade them in to reveal a word. *Zero*

- 1) $(-2) + (-2)$

2) $5 + (-3)$

3) $(-5) + 4$

4) $4 + (-7)$

5) $9 + (-1)$
- 6) $(-4) + 2$

7) $(-6) + (-2)$

8) $7 + (-2)$

9) $1 + (-7)$

10) $4 + (-11)$

(-4)	(-7)	2	1	(-2)	(-4)	8	(-5)	8	(-4)	(-7)	6	(-3)	2	(-6)
(-5)	6	(-3)	(-9)	(-7)	4	0	4	(-6)	3	(-3)	(-5)	(-8)	(-9)	(-1)
3	5	(-9)	5	(-3)	5	6	(-9)	(-1)	(-3)	(-8)	7	8	0	5
(-7)	0	7	4	2	7	3	7	5	(-1)	6	4	(-4)	3	(-7)
(-8)	(-6)	8	0	(-6)	(-8)	(-7)	(-5)	2	0	8	(-9)	(-1)	8	(-3)

Task C: Deepening understanding of addition of integers

- 1) $72 + (-18) = 54$
- 2) $(-7) + 3 + (-9) + 4 + (-11) = (-20)$
- 3) $(-110) + (-18) = (-128)$
- 4) $(-14) + 29 + (-3) + 11 + (-13) = 10$
- 5) $125 + (-45) = 80$
- 6) $(-7) + (-12) + (-24) = (-43)$
- 7) $(-135) + 82 = (-53)$
- 8) Make up your own addition question using positive and negative integers so that the sum of all of the answers in this task is 0. *e.g. $(-80) + 180$ or any sum equal to 100*
