

Subtraction of positive and negative integers

Task A: Rewriting a subtraction as an equivalent addition

Match each subtraction to its equivalent addition.

Task B: Subtraction of positive and negative integers

Find your way through the maze.

START	6 $(-3) - (-4)$	(-7) $2 - 7$	5 $6 - (-2)$	8 $\square - 4 = (-6)$	(-2) $2 - 9$
5 - (-1)	1 $1 - 6$	(-5) $(-7) - 2$	(-9) $2 - \square = 6$	(-4) $\square - 7 = (-4)$	(-11) $(-3) - (-1)$
4 $(-7) - 3$	7 $8 - (-4)$	(-5) $3 - (-1)$	8 $(-1) - (-4)$	3 $(-1) - 1$	(-2) $(-11) - (-5)$
(-10) $(-4) - 1$	12 $(-4) - 2$	(-6) $8 - (-1)$	9 $5 - 6$	0 $(-4) - \square = (-2)$	(-6) $(-4) - (-4)$
(-3) $(-2) - (-4)$	7 $7 - \square = 9$	(-2) $(-3) - 1$	(-4) $3 - 5$	(-2) $10 - 18$	FINISH (-8)

Task C: Deepening understanding of subtraction of integers

1) $(-1) + 5 - (-6) - 2 + (-10) = (-2)$

2) $5 + (-2) + 3 - (-3) - 11 + (-2) - (-5) = 1$

3) $2 - (-9) - 8 + (-18) - (-3) = (-12)$

4) $(-11) - 4 - (-7) - 1 + (-7) - (-10) = (-6)$

For the next questions find the missing integer:

5) $(-8) - 1 + (-7) - (-6) = (-10)$

6) $6 - (-1) - 15 + (-12) - (-23) = 3$
