

Using the fx-CG50 for number and algebra

1 Use your calculator to solve $a^2 - 12a + 11 = 0$ (Tick 1 correct answer)

☐ $a = 1, a = 11$

☐ $a = 3, a = 4$

☐ $a = -1, a = -11$

☐ $a = -3, a = -4$

2 Use your calculator to solve $x^2 + 6x + 8 = 3$ (Tick 1 correct answer)

☐ $x = -1, x = -5$

☐ $x = -1, x = 5$

☐ $x = 1, x = -5$

☐ $x = 1, x = 5$

3 Use your calculator to solve $x^2 + 12x - 15 = 4x + 5$ (Tick 1 correct answer)

☐ $x = -2, x = -10$

☐ $x = -2, x = 10$

☐ $x = 2, x = -10$

☐ $x = 2, x = 10$

4 For the formula $v = u + at$, what is the value of a when $v = 20$, $u = 4$ and $t = 4$?

5 For the formula $Q = \frac{f}{s - v}$, what is the value of s when $v = 5$, $f = 16\,000$ and $Q = 45\,000$? Give your answer to 2 d.p.

- 6 For the formula $A = 2\pi r^2 + 2\pi rh$, what is the value of r when $A = 756$ and $h = 22$?
Give your answer to 2 d.p.
