

Name: _____

Checking and securing converting improper fractions to mixed numbers

Task A: Proper and improper fractions

1) Insert the inequalities = , > and < to make the statement true

a) $\frac{4}{5} \square 1$

c) $(11 \div 5) \square 1$

b) $\frac{8}{3} \square 1$

d) $\frac{6 \times 2}{3 \times 4} \square 1$

2) Identify if the following are true or false

Statement	True	False
The value of a proper fraction is always less than 1		
The value of an improper fraction is always greater than 1		
A fraction in the form a/b where $a > b$ is an improper fraction		
$789 \div 788$ will give a number greater than 1		

3) Without calculating the answer,

which letter corresponds to the calculation

a) $5677 \div 5678$ is letter

b) $5678 \div 5678$ is letter

c) $5679 \div 5678$ is letter

d) $5678 \div 2880$ is letter

4) Here is a section of a number line

- a) Which whole number is the arrow pointing to?
- b) Approximately mark another two whole numbers on the number line. What are these whole numbers?
- c) How would your answers change if the denominator was 6?
- d) What could the denominator be if there were no whole numbers between the two fractions?

Task B: Changing improper fractions to mixed numbers

1) Write the **mixed number** of the following **improper fractions**.

- a) $\frac{13}{3}$
- b) $\frac{20}{7}$
- c) $\frac{104}{5}$
- d) $\frac{50}{3}$

2) Fill in the blanks.

a) $\frac{15}{6} = 2 \frac{\boxed{}}{\boxed{}}$

b) $\frac{91}{6} = \frac{\boxed{}}{\boxed{}} \frac{1}{6}$

c) $\frac{142}{4} = \frac{71}{\boxed{}} = \frac{\boxed{}}{\boxed{}} \frac{1}{2}$

d) $\frac{134}{8} = \frac{\boxed{}}{4} = \frac{\boxed{}}{\boxed{}} \frac{3}{4}$

3) Put the following numbers in ascending order, smallest to largest. Converting to a **mixed number** may help.

a) $1\frac{2}{3}$ $\frac{9}{11}$ $4\frac{1}{5}$ $\frac{17}{2}$ $\frac{9}{2}$

b) $\frac{7}{2}$ $\frac{2}{3}$ $\frac{4}{5}$ $\frac{19}{3}$ $\frac{211}{50}$
