

Name: _____

Constructing triangles

Task A: Constructing a scalene triangle

You will need a blank piece of A4 paper to draw all the answers to Task A. They will not fit on this sheet.

1) Construct this triangle accurately.

2) Construct the triangle with edge lengths 6 cm, 8 cm and 10 cm.

3) Construct triangle ABC, where $AB = 12$ cm, $BC = 13$ cm and $AC = 50$ mm.

4) Construct the scalene triangle that has an edge of 6 cm, an edge of 7 cm and a perimeter of 23 cm.

5) Construct a scalene triangle with a perimeter of 180 mm.

Task B: Constructing triangles with equal edges

1) XY is an edge of a triangle. Which of the points A to G when joined to XY would create:

- a) an isosceles triangle
- b) a right-angled triangle
- c) a right-angled isosceles triangle

2) Construct an equilateral triangle, using the line as one of the edges.

3) Construct an isosceles triangle where the equal edges are 9 units and the base edge is 7 units. Use this scale.

4) A tetrahedron is a 3D shape with four equilateral triangular faces. Construct the net of a tetrahedron. Draw this on a separate sheet of paper.
