

Constructing rhombi

- 1 This kite has been created by using two triangles, joined by a common edge length. The two triangles are ... Tick **1** correct answer

- ☐ ...congruent equilateral triangles
- ☐ ...congruent isosceles triangles
- ☐ ...congruent scalene triangles
- ☒ ...different isosceles triangles
- ☐ ...different scalene triangles

- 2 A rhombus is a parallelogram where all sides are the same length. Fill in the blank

- 3 A rhombus is a quadrilateral where ... Tick **2** correct answers

- ☒ ...all edges are equal.
- ☐ ...all angles are equal.
- ☒ ...there are two sets of parallel sides.
- ☐ ...there are no lines of symmetry.
- ☐ ...there are two sets of equal angles.

4 Which of these show the correct construction of a rhombus? Tick 2 correct answers

☐

☒

☒

☐

5 If Jun and Jacob were to both construct a rhombus with edge lengths of 8 cm, would their constructions be identical? Tick 1 correct answer

☐

Yes - both of the rhombi would have edge lengths of 8 cm, so they are the same.

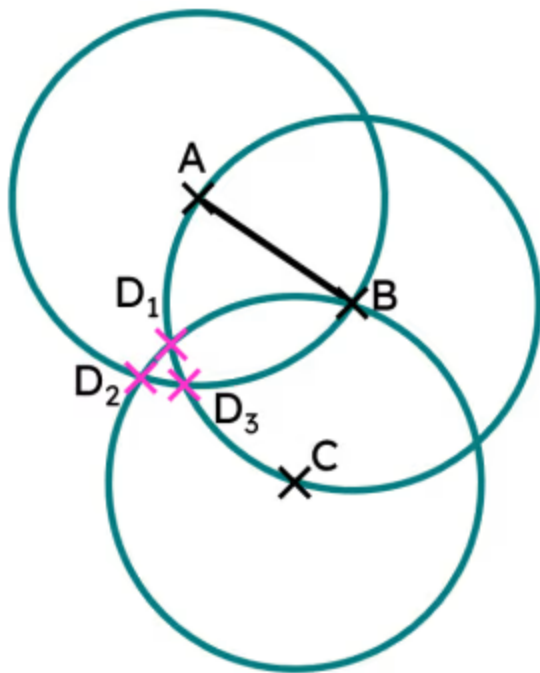

☐

No - they can have the same edges but the angles can be different.

☒

Maybe - if they both constructed the rhombus using equilateral triangles.

6 Sofia is constructing a rhombus from one given edge AB. She has nearly finished the construction of rhombus ABCD. Where is vertex D? Tick 1 correct answer

☐

D_1

☒

D_2

☐

D_3
