

Constructing rhombi

- 1 _____ triangles have two equal-sized angles. Two of the three edges are equal in length. Fill in the blank
- 2 As this triangle is isosceles, the angle marked a is _____. Fill in the blank

- 3 Which of these could be a sketch of an equilateral triangle? Tick **1** correct answer

☐☐☐☐

- 4 Which of the following sets of lengths could be the edges of a triangle? Tick **3** correct answers

- ☐ 6 cm, 8 cm and 10 cm
- ☐ 30 mm, 42 mm and 95 mm
- ☐ 2.6 cm, 63 mm and 10.6 cm
- ☐ 12 mm, 4.7 cm and 5.2 cm
- ☐ 10 m, 12 m and 18 m

5 Select all the statements which are true of all quadrilaterals. Tick **2** correct answers

- ☐ All quadrilaterals have four edges.
- ☐ Interior angles of all quadrilaterals sum to 180° .
- ☐ All quadrilaterals have at least one set of parallel sides.
- ☐ All quadrilaterals can be split into two triangles.
- ☐ All quadrilaterals have a right angle.

6 Put the steps of constructing an equilateral triangle in order. Use numbers to show the correct order

	Use your pencil and ruler to draw one edge to the required length.
	Put the needle point on the other end of the line segment.
	Set the width of the pair of compasses to the length of the drawn edge.
	Check the width of the pair of compasses is still the length of the edge.
	Connect the point of intersection to the ends of the line segment.
	Draw an arc, which intersects with the first arc.
	With the needle point on one end of the line segment, draw an arc.
