

Constructing rhombi

Task A: Creating shapes from triangles

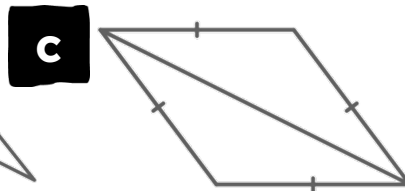

1) By considering the properties of the quadrilateral, what types of triangles are they?

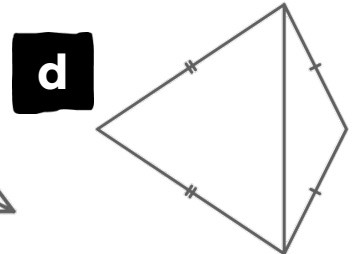

2 congruent
right-angled
isosceles triangles

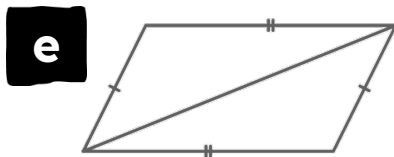

2 congruent
scalene triangles

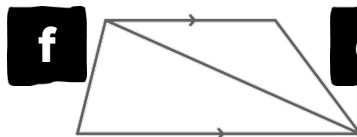

2 congruent
isosceles triangles

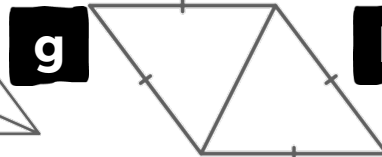

2 isosceles
triangles

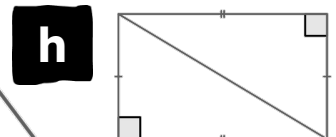

2 congruent
scalene triangles

2 scalene
triangles

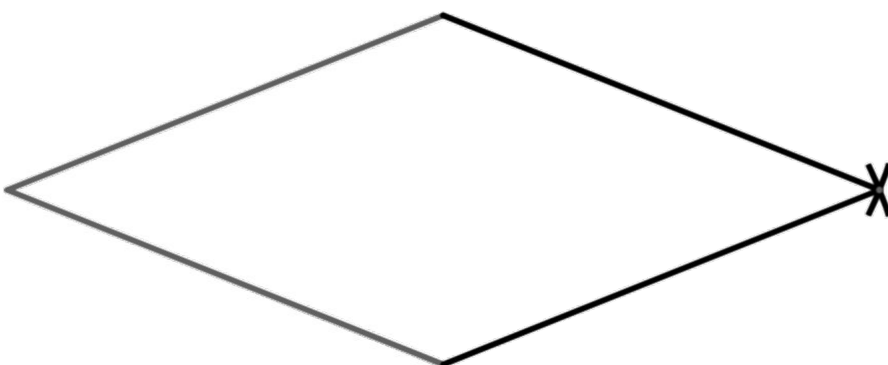

2 congruent
isosceles triangles

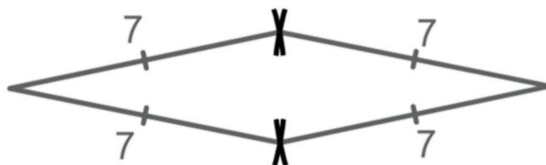

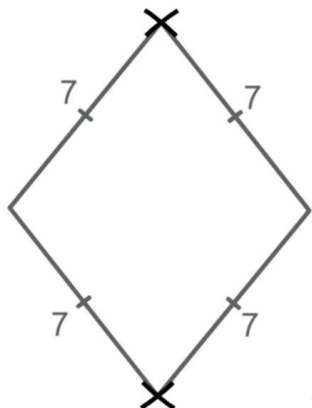

2 congruent
right-angled
scalene triangles

Task B: Constructing rhombi

1) Finish constructing this rhombus, from the two given sides.

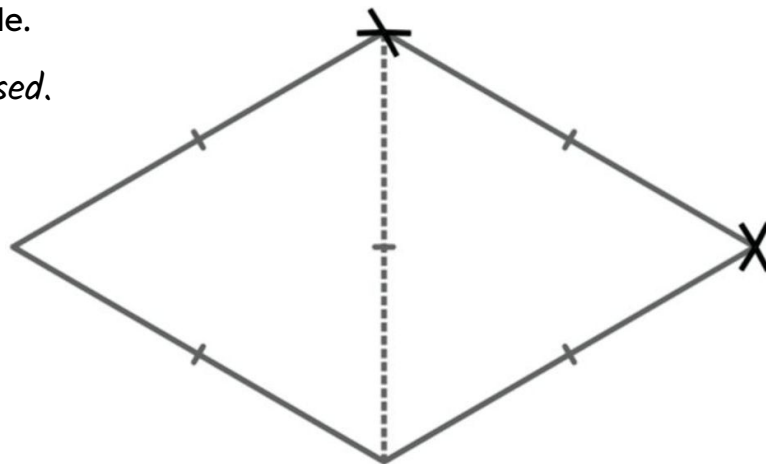

2) Construct three different rhombi, with side lengths 7 cm.
You will need to use a blank sheet of A4 paper for this task.

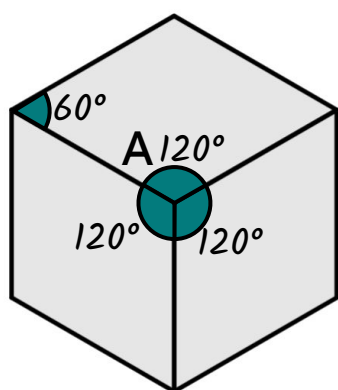

The base of the isosceles triangles can vary but the two edges that are equal needed to be 7 cm.

3) Construct a rhombus, with a 60° angle.

*Two equilateral triangles need to be used.
The angles should all be 60°*

4) Construct this isometric cube, where each face is a rhombus.

Hint: The three rhombi are congruent, therefore the angles at the centre point (A) are all equal.
