

Bisecting an angle

- 1 Which of these diagrams shows the compass width being accurately set to 5 cm? Tick 1 correct answer

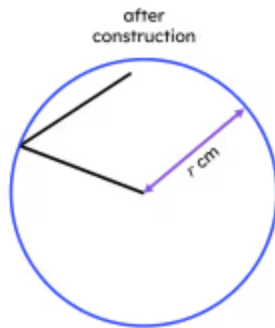

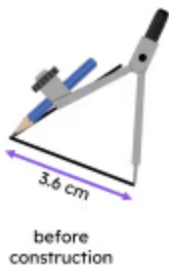

☐ a

☐ b

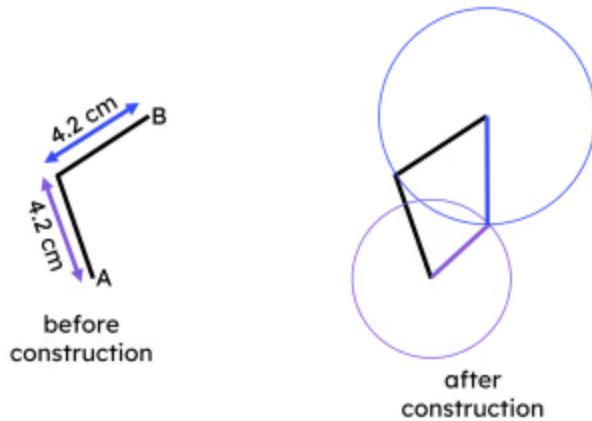

☐ c

- 2 What is the value of r , the radius of the circle drawn? Fill in the blank

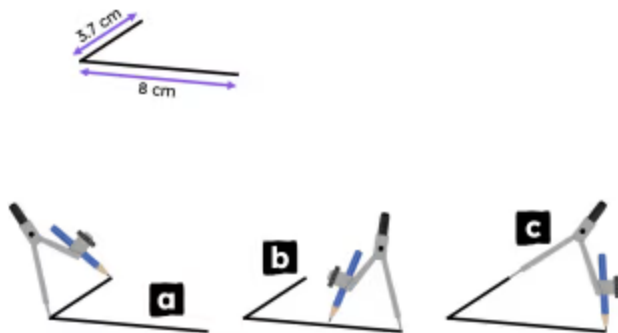

3 Which statements are correct about this construction? Tick **2** correct answers

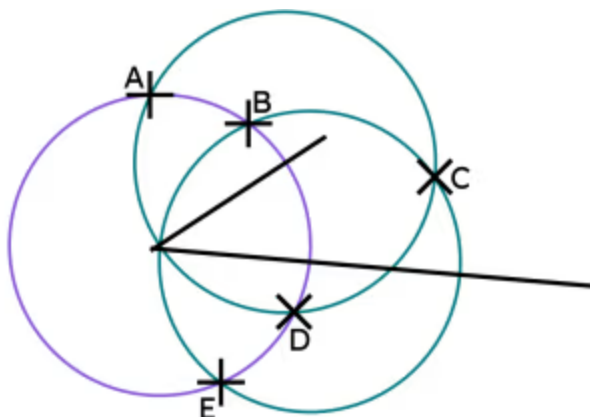

- ☐ A rhombus has been constructed as both legs of the angle are of equal length.
- ☐ A rhombus has been constructed as both circles use endpoints A and B as centres.
- ☐ A rhombus hasn't been constructed as all four sides aren't of equal length.
- ☐ A rhombus hasn't been constructed as both circles are not the same size.
- ☐ A rhombus hasn't been constructed as a pair of compasses haven't been used.

4 The two legs of the angle are different in length. Which compass placement is correct in order to create a pair of shorter legs of equal length? Tick **1** correct answer

- ☐ a
- ☐ b
- ☐ c

5 This diagram shows the correct constructions to bisect an angle. Which point of intersection between two circles must the bisecting line pass through? Tick **1** correct answer

- ☐ a
- ☐ b
- ☐ c
- ☐ d
- ☐ e

- 6 Which of these construction arcs could be the first to be drawn in a construction to bisect an angle? Tick 2 correct answers
