

Perpendicular bisector of a line segment

- 1 Which of these diagrams show a perpendicular bisector on a rhombus? Tick **2** correct answers

- 2 Which of these compass widths are suitable when constructing the perpendicular bisector of the given line segment? Tick **2** correct answers

- 3 Which of these constructions can be used to draw on the perpendicular bisector of the line segment given? Tick **2** correct answers

- 4 Each of the two circles has been drawn with a radius of 7 cm, one with centre Y, and the other with centre Z. Match the statement to the point it describes. Write the correct letter in each box

a	point A
b	point B
c	point C
d	point D

c	7 cm away from Z and greater than 7 cm away from Y.
d	7 cm away from both Y and Z.
b	7 cm away from Y and less than 7 cm away from Z.
a	7 cm away from Y and greater than 7 cm away from Z.

- 5 Lucas wants to construct the perpendicular bisector of line segment RS, which has a length of 18 cm. Which of these construction methods are possible? Tick 2 correct answers

- ☐ Constructing arcs of radius 6 cm at both points R and S.
- ☐ Constructing arcs of radius 9 cm at both points R and S.
- ☒ Constructing arcs of radius 12 cm at both points R and S.
- ☒ Constructing arcs of radius 18 cm at both points R and S.
- ☐ Constructing an arc of radius 12 cm at R and an arc of radius 18 cm at S.

6 Which of these statements is true about this construction? Tick **2** correct answers

- ☐ A perpendicular bisector to YZ has definitely been constructed.
- ☐ A perpendicular bisector to YZ has definitely not been constructed.
- ☒ The construction of the perpendicular bisector to YZ is incomplete.
- ☐ The angle between the two line segments is 88° .
- ☒ Two more arcs need to be constructed.
