

Changing the subject with simple formula

- 1 The _____ of a formula is a variable expressed in terms of other variables. Tick **1** correct answer

☐ solution

☐ subject

☐ value

☐ variable

- 2 y^2 is not the subject of the equation $y^2 = 25 - x^2$. Why not? Tick **1** correct answer

☐ Because y^2 is not the solution.

☐ Because x is the subject.

☐ Because the exponent of y is not 1.

☐ Because this is not an equation.

- 3 Match each equation to its subject. Write the correct letter in each box

a	$c + d + e = f$
b	$c = f - (d + e)$
c	$c - d - f = e$
d	$d = c - ef$

	c
	f
	d
	e

- 4 Laura wants to make x the subject of the equation $x + 3y = 17$. Which operation should she apply to both sides of the equation? Tick **1** correct answer

☐ $- 17$
☐ $\div 3$
☐ $- x$
☐ $- 3y$
☐ $+ 3y$

5 Make n the subject of $T = 25 - n$. Tick **1** correct answer

☐ $n = 25$

☐ $n + T = 25$

☐ $n = T - 25$

☐ $n = 25 - T$

☐ $n = T - 25$

6 The formula for the volume of a cylinder is $V = \pi r^2 h$. Select the correct arrangement of the formula to make h the subject. Tick **1** correct answer

☐ $V\pi r^2 = h$

☐ $\frac{V}{\pi r} = h^2$

☐ $\frac{V}{\pi r^2} = h$

☐ $h = \frac{\pi r^2}{V}$

☐ $\frac{V}{h} = \pi r^2$
