

Changing the subject with simple formula

1 Division in the _____ operation of multiplication. Tick **1** correct answer

☐ improper

☐ inequal

☐ invariant

☒ inverse

2 Select the rearrangements of the additive relationship $389.16 + 417.4 = 806.56$. Tick **2** correct answers

☒ $417.4 + 389.16 = 806.56$

☐ $806.56 + 417.4 = 389.16$

☐ $417.4 - 806.56 = 389.16$

☒ $806.56 - 417.4 = 389.16$

☐ $417.4 - 389.16 = 806.56$

3 Select the rearrangements of the multiplicative relationship $y = 5x$. Tick **2** correct answers

☐ $5y = x$

☐ $\frac{5}{y} = x$

☒ $\frac{y}{5} = x$

☒ $\frac{y}{x} = 5$

☐ $\frac{x}{y} = 5$

4 The solution to $x - 13 = 63$ is $x = \underline{76}$. Fill in the blank

- 5 Laura begins to solve the equation $x - 12 = 13$ by writing $x - 12 + 12 = 13$. What error has Laura made? Tick **1** correct answer
- ☐ Laura should add 13, not 12.
- ☒ Laura has only performed the operation $+ 12$ to one side of the equation.
- ☐ The answer is obviously just 1. Laura doesn't need a method here.
- ☐ Laura should do $- 12$, not $+ 12$
- 6 Which of the below are rearrangements of the equation $17 - x = 2y$? Tick **2** correct answers
- ☐ $17 + 2y = x$
- ☒ $17 = 2y + x$
- ☐ $x - 17 = 2y$
- ☒ $17 - 2y = x$
- ☐ $17 - 2x = y$
