

Changing the subject with more complex formula

1 The subject of a formula is a variable expressed in terms of the other _____. Tick **1** correct answer

☐ equations

☐ values

☐ variables

☐ variants

2 x^2 is not the subject of the equation $x^2 = 9 - y^2$. Why not? Tick **1** correct answer

☐ Because the coefficient is not 1.

☐ Because the exponent of x is not 1.

☐ Because y^2 is the subject.

☐ That's incorrect. x^2 is the subject of the equation.

3 Which of these are rearrangements of the equation $5e - 7 = 2d$? Tick **3** correct answers

☐ $7 - 5e = 2d$

☐ $5e - 2d = 7$

☐ $5e = 7 + 2d$

☐ $2d + 7 = 5e$

☐ $2d + 5e = 7$

4 Which two inverse operations should you perform to both sides to solve the equation $6x + 7 = 49$? Tick **2** correct answers

☐ $- 49$

☐ $+ 7$

☐ $- 7$

☐ $\times 6$

☐ $\div 6$

- 5 Select the expressions that are equivalent to $\frac{1}{3}(y - 5)$. Tick **2** correct answers

☐ $\frac{1}{3}y - 5$

☐ $\frac{y}{3} - 5$

☐ $\frac{y}{3} - \frac{5}{3}$

☐ $\frac{y - 5}{3}$

☐ $y - \frac{5}{3}$

- 6 Match each expression to its description. Write the correct letter in each box

a	$5d + 2$
b	$\frac{d}{5} + 2$
c	$\frac{d + 5}{2}$
d	$2d + 5$
e	$5(d + 2)$
f	$\frac{1}{5}(d + 2)$

	d add 2 then divided by 5
	d divided by 5 then add 2
	d multiplied by 2 then add 5
	d add 5 then divided by 2
	d multiplied by 5 then add 2
	d add 2 then multiplied by 5
