

Checking understanding of similarity

- 1 Two shapes are similar if the only difference between them is their size. Their side lengths are in the same proportions. (Fill in the blank)
- 2 The _____ is the multiplier between similar shapes that describes how large one shape is compared to the other. (Tick 1 correct answer)
- ☐ centre of enlargement
- ☐ line of reflection
- ☒ scale factor
- ☐ vector
- 3 Which rectangle is a correct enlargement of rectangle R? (Tick 1 correct answer)

- 4 Triangle A has been enlarged by a scale factor of 2 to get triangle B. Match each unknown length from triangle B with its size. (Write the correct letter in each box)

a	a cm
b	b cm
c	c cm

a	8 cm
c	10 cm
b	6 cm

- 5 A square has length 8 cm. It is enlarged by a scale factor of $\frac{1}{2}$. The side length of its image is 4 cm. (Fill in the blank)

- 6 Each angle in an equilateral triangle is 60° . If an equilateral triangle is enlarged by a scale factor of 2, each of its angles will be 60 $^\circ$. (Fill in the blank)
