

Congruence in shapes

Task A: Identifying congruence

- 1) The shapes below contain three pairs of congruent shapes. Match the shapes which are congruent. You may use a ruler and protractor to determine congruence.

- 2) Which shapes contain enough information to be able to determine whether it is congruent to shape A? Tick the shapes where congruence can be determined.
The diagrams are not drawn accurately and all lengths are given in the same units.

Task B: Solving problems with congruence

1) For each question draw a rectangle and then split it according to the instructions.

a) Split the rectangle into **two incongruent** shapes.

b) Split the rectangle into **two congruent** shapes.

c) Split the rectangle into **three incongruent** shapes.

d) Split the rectangle into **three congruent** shapes.

e) Split the rectangle so that **two shapes** are **congruent** and the other is incongruent.

f) Split the rectangle into **four incongruent** shapes.

g) Split the rectangle into **four congruent** shapes.

h) Split the rectangle into **two pairs** of **congruent** shapes.
