

Rotational symmetry

- 1 Rotational symmetry describes when a shape appears the same after some rotation. Fill in the blank
- 2 An equilateral triangle has rotational symmetry of order 3. Fill in the blank
- 3 A scalene triangle has rotational symmetry of order 1. Fill in the blank
- 4 Which of these quadrilaterals always has rotational symmetry of order 4? Tick **1** correct answer
 - ☐ kite
 - ☐ parallelogram
 - ☐ rectangle
 - ☒ square
 - ☐ trapezium
- 5 The wheel in this picture has rotational symmetry of order 8. Fill in the blank

- 6 Starting with the lowest, order these shapes according to their order of rotational symmetry. Use numbers to show the correct order

1	isosceles triangle (that is not equilateral)
5	circle
3	equilateral triangle
2	rhombus
4	regular pentagon
