

Rotational symmetry

- 1 Rotational _____ describes when a shape appears the same after some rotation. Fill in the blank
- 2 An equilateral triangle has rotational symmetry of order _____. Fill in the blank
- 3 A scalene triangle has rotational symmetry of order _____. Fill in the blank
- 4 Which of these quadrilaterals always has rotational symmetry of order 4? Tick **1** correct answer
 - ☐ kite
 - ☐ parallelogram
 - ☐ rectangle
 - ☐ square
 - ☐ trapezium
- 5 The wheel in this picture has rotational symmetry of order _____. Fill in the blank

- 6 Starting with the lowest, order these shapes according to their order of rotational symmetry. Use numbers to show the correct order

	isosceles triangle (that is not equilateral)
	circle
	equilateral triangle
	rhombus
	regular pentagon
