

Rotational symmetry

- 1 The transformation that turns an an object around a fixed point is called rotation . Fill in the blank
- 2 The centre of rotation is the fixed point about which an object is rotated. Fill in the blank
- 3 There are exactly five equal sized angle around a point. Each angle is 72 °. Fill in the blank
- 4 Which quadrilateral is always regular? Tick **1** correct answer
 - ☐ parallelogram
 - ☐ rectangle
 - ☐ rhombus
 - ☒ square
 - ☐ trapezium
- 5 The arrow on the left can be rotated 90 ° clockwise to create the arrow on the right. Fill in the blank

- 6 The rectangle ACDB is rotated to give rectangle D'B'A'C'. The angle of rotation is 180°.
Fill in the blank
