

Congruent triangles (SSS)

- 1 If triangle ABC is congruent to triangle PQR. Match the corresponding equal edges. Write the correct letter in each box

a	AB
b	BC
c	AC

b	PR
c	QP
a	QR

- 2 Triangle MNO is congruent to triangle ABC by SSS and MN is 11 cm. Which angle in triangle MNO is opposite MN? Tick **1** correct answer

- ☐ 32°
☐ 45°
☒ 103°

- 3 Triangle MNO has two angles of 103° and 32° . Side MN is 12 cm. Are triangle ABC and MNO congruent? Tick **1** correct answer

- ☐ Yes - their corresponding angles are the same.
- ☒ No - the corresponding edges are not the same.

- 4 STUV is a square. Match each statement to a reason to prove that triangle STU is congruent to triangle SVU by SSS. Write the correct letter in each box

a	ST = SV
b	TU = VU
c	SU

a	as ST and SV are both edges of the same square.
c	is a common edge to both triangles.
b	as TU and VU are both edges of the same square.

- 5 Jun measures each of these triangles. Which of the triangles are congruent to this triangle by SSS? Tick 2 correct answers

- 6 PQRS is an isosceles trapezium. $PR = QS$. Match the letters in the proof with the correct edge. Write the correct letter in each box

a is a common edge
 $PS = b$ as it is an isosceles trapezium
 $QS = c$ given in the question
 Hence, triangle PQR is congruent to triangle PSQ by SSS

a	a
b	b
c	c

b	QR
c	PR
a	PQ
