Extending thinking about sequences

1 In mathematics, sequences can be described as concrete or _____. Tick **1** correct answer

☐ abstract

☐ non-concrete

2 In 1980, the world marathon record was 2 hrs 10 mins. In the year 2000, it was 2 hrs 5 mins. In the year 2020, it was 2 hrs 0 mins. This is an example of _____ sequence. Tick **1** correct answer

☐ a concrete

☐ an abstract

3 In 1980, the world marathon record was 2 hrs 10 mins. In the year 2000, it was 2 hrs 5 mins. In the year 2020, it was 2 hrs 0 mins. Why is this concrete sequence limited? Tick **1** correct answer

☐ It is not limited. The pattern will continue at -5 minutes per decade.

☐ Records are decreasing now but can never reach zero. There are physical limits.

☐ The record of 2hrs 0 mins cannot be broken.

4 What value would come before this geometric sequence? 196, 1372, 9604, 67 228, ... Fill in the blank

- 5 Scientists begin to study the population of a particular fish in the North Sea and find it forms a geometric sequence. Using the sequence to predict the population for year 5. Tick **1** correct answer

Year	1	2	3	4
Population	2 530 000	2 783 000	3 061 300	3 367 430

☐ 3 074 173

☐ 3 407 173

☐ 3 704 173

☐ 3 707 143

- 6 Scientists begin to study the population of a particular fish in the North Sea and find it forms a geometric sequence. Estimate the population of the fish the year before the study began. Fill in the blank

Year	1	2	3	4
Population	2 530 000	2 783 000	3 061 300	3 367 430
