

Efficiently drawing linear graphs

1 The - intercept is the point where a line or curve meets the y-axis. Fill in the blank

2 Which of these graphs will form straight line when plotted? Tick 3 correct answers

☒ $y = 2x + 3$

☐ $y = 2x^3 + 3$

☐ $y = 3x^2 + 3$

☒ $y = 3x - 2$

☒ $y + 2x = 3$

3 Identify the linear graphs with a gradient of 4. Tick 2 correct answers

☒ $y = 4x - 3$

☐ $y = x + 4$

☐ $y = 3 - 4x$

☐ $y = 4x^3$

☒ $y = 3 + 4x$

4 These are all linear equations which give straight line graphs. Match each linear equation with another equation to form a pair of parallel lines. Write the correct letter in each box

a	$y = 5x + 2$
b	$y = 5 - 2x$
c	$y = 2x$
d	$y = x - 5$
e	$y = 2 - x$

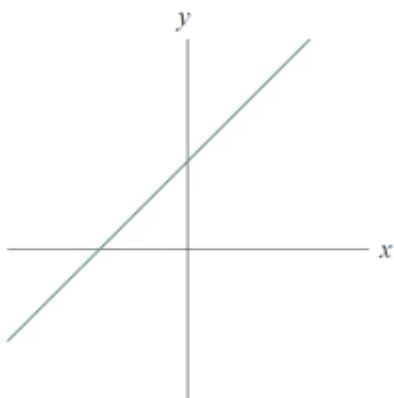

b	$y = -2x + 5$
e	$y = -x - 5$
d	$y = x - 2$
a	$y = 2 + 5x$
c	$y = 2x + 5$

5 What features of the graph of $y = 5 - 7x$ can be found just by looking at the equation? Tick **3** correct answers

- ☐ It has a gradient of 7
- ☒ It has a gradient of -7
- ☒ It has a y-intercept of 5
- ☐ It has a y-intercept of -7
- ☒ It is a straight line.

6 Which of these equations could this sketch represent? Tick **2** correct answers

- ☐ $y = 3x - 8$
- ☒ $y = 8x + 3$
- ☐ $y = 8 - 3x$
- ☐ $y + 8x = 3$
- ☒ $y - 3x = 8$
