

Reading from graphs

Task A: Reading from linear graphs

1) Use this graph of $y = 3 - \frac{1}{2}x$ to solve these equations.

a) $3 - \frac{1}{2}x = 1 \quad x = 4$

b) $3 - \frac{1}{2}x = 0 \quad x = 6$

c) $3 - \frac{1}{2}x = 5 \quad x = -4$

2) Use this graph of $y = 1.75x - 0.3$ to calculate:

a) $1.75 \times 0.8 - 0.3 = 1.1$

b) $1.75 \times 0.4 - 0.3 = 0.4$

c) $1.75 \times -0.4 - 0.3 = -1$

3) The Oak pupils plot their age against how many books they have read and find a linear relationship.

a) Use the graph to estimate the age of a pupil who has read 400 books.

≈ 14

b) Use the graph to predict how many books a pupil will have read by the time they reach 18.

≈ 575

Task B: Reading from quadratic graphs

1) This is the graph of the quadratic equation $y = \frac{1}{2}x^2 + 4x$

Use the graph to solve:

a) $\frac{1}{2}x^2 + 4x = 10$ $x = -10$ and $x = 2$

b) $\frac{1}{2}x^2 + 4x = 0$ $x = -8$ and $x = 0$

c) $\frac{1}{2}x^2 + 4x = -8$ $x = -4$ one value only

2) This parabola models the flight of a cricket ball being thrown.

Use the graph to read:

a) The height of the ball at a distance 18 metres.

Height = 5 m

b) The distance when the ball is at a height of 9 metres.

Distance = 6 m and 14 m

c) The distance when the ball is at a height of 12 metres.

The ball never reaches a height of 12 m
