

Graphically solving two linear graphs that intersect

- 1 The point where the lines $y = 2x + 4$ and $y = 2 - x$ meet is called the _____. Tick **1** correct answer

- ☐ answer
- ☐ intersection
- ☐ solution
- ☐ variable

- 2 Izzy plots the graphs of $y = 2x + 1$ and $y = 3x - 2$ on the same coordinate grid. How many points will lie on both lines? Fill in the blank

- 3 The linear equations $y = 2x + 5$ and $y = 2 - x$ intersect at the point with coordinates $(-1, 3)$. What is the solution to the equation $2x + 5 = 2 - x$? Tick **1** correct answer

- ☐ $x = -1$
- ☐ $x = 3$
- ☐ $y = -1$
- ☐ $y = 3$

- 4 Use the graph to solve the simultaneous equations $y = 2x - 1$ and $y = 3x - 2$. Tick **1** correct answer

- ☐ $x = 2, y = 3$
☐ $x = 7, y = -2$
☐ $x = 1, y = 1$
☐ $x = -2, y = 7$
☐ $x = 3, y = 2$

- 5 The diagram shows 6 points and the the lines $y = 2x - 1$ and $y = 5 - x$. Which points satisfy the inequality $y > 2x - 1$? Tick **1** correct answer

- ☐ A and C
☐ C and D
☐ A and D
☐ A, B and C
☐ D, E and F

- 6 The diagram shows 6 points and the the lines $y = 2x - 1$ and $y = 5 - x$. The point that is the region $y > 5 - x$ and $y < 2x - 1$ is _____. Fill in the blank
