

Interpreting scatter graphs

- 1 The scatter graph show minimum and maximum temperatures for different months in a town. Which statement best describes the trend in the data? Tick **1** correct answer

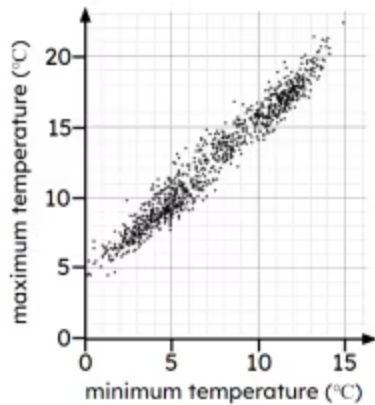

- ☒ Months with higher minimum temperature have higher maximum temperatures.
- ☐ Months with higher minimum temperature have lower maximum temperatures.
- ☐ There is no connection between the variables.

- 2 Which scatter graphs shows a case where as one variable increases the other variable tends to decrease? Tick **1** correct answer

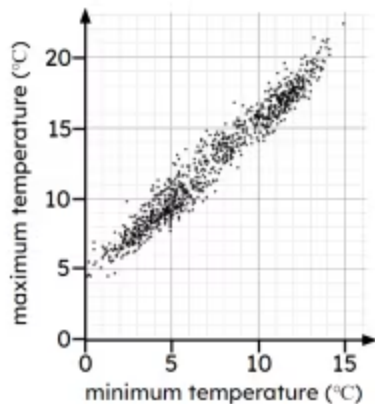

☐

☐

☒

- 3 Look at the scatter graph. A new month records a minimum temperature of 10 degrees Celsius. Which range could we expect the maximum temperature to be in? Tick **1** correct answer

- ☐ 4 to 6 degrees Celsius
- ☐ 8 to 11 degrees Celsius
- ☒ 14 to 17 degrees Celsius
- ☐ 19 to 21 degrees Celsius

- 4 Look at the scatter graph. A new month records a maximum temperature of 10 degrees Celsius. Which range could we expect the minimum temperature to be in? Tick **1** correct answer

- ☒ 4 to 6 degrees Celsius
- ☐ 8 to 11 degrees Celsius
- ☐ 14 to 17 degrees Celsius
- ☐ 19 to 21 degrees Celsius

- 5 interpolation is the process of estimating unknown values that are inside the range of existing data. Fill in the blank

- 6 Which statement is true? Tick **1** correct answer

- ☐ Extrapolation is more reliable than interpolation for estimating data.
- ☒ Interpolation is more reliable than extrapolation for estimating data.
- ☐ Extrapolation and interpolation are equally reliable for estimating data.
