

Securing constructing pictograms

Task A: Constructing and interpreting pictograms

1) Use the pictogram to answer the following questions

- a) How many bikes are sold in month 1? *40 bikes*
- b) How many bikes are sold in month 3? *30 bikes*
- c) How many bikes are sold over the three month period? *90 bikes*

month 1	 
month 2	
month 3	 

Key  = 20 bikes

2) Complete the pictogram and frequency table.

paper	  
metal	   
green	 

Type of material	Frequency
paper	150
metal	200
green	75

Key  = 50 tonnes

3) Draw a pictogram for the following data.

Visits	Frequency
hour 1	16
hour 2	9
hour 3	13

hour 1	      
hour 2	    
hour 3	      

Key  = 2 visits

Any suitable icon could be used to represent this information.

Task B: Using pictograms in a data investigation

- 1) Aisha wants to persuade her teachers that students do not have enough time to complete homework.

She collects data about the number of extra-curricular clubs her classmates attend.

3, 2, 0, 5, 2, 7, 1, 1, 2, 4, 3, 6, 3, 4, 5, 1, 0, 1, 3, 4, 2, 1, 4, 5, 6, 1, 3, 2, 4, 1

- a) Complete this pictogram to show Aisha's findings.

Key  = 2 students

- b) What does the pictogram show?

Most of the class attend at least one extra-curricular activity. Over half of the students attend 3 or more extra-curricular activities.

- c) What other information may support Aisha's claim that students do not have enough time to complete homework?

You may have considered:

- clubs/groups/choirs that students attend outside of school
- time to travel home from school

- 2) Here is a pictogram from a charity about the sales of clothes in three of their shops over a two week period.

The charity can see that shop 2 is not in line with the other shops.

What might the charity want to investigate next?

You may have considered:

- shop 2's pricing
- shop 2's opening times
- shop 2's competitors
