

Securing constructing bar charts by hand

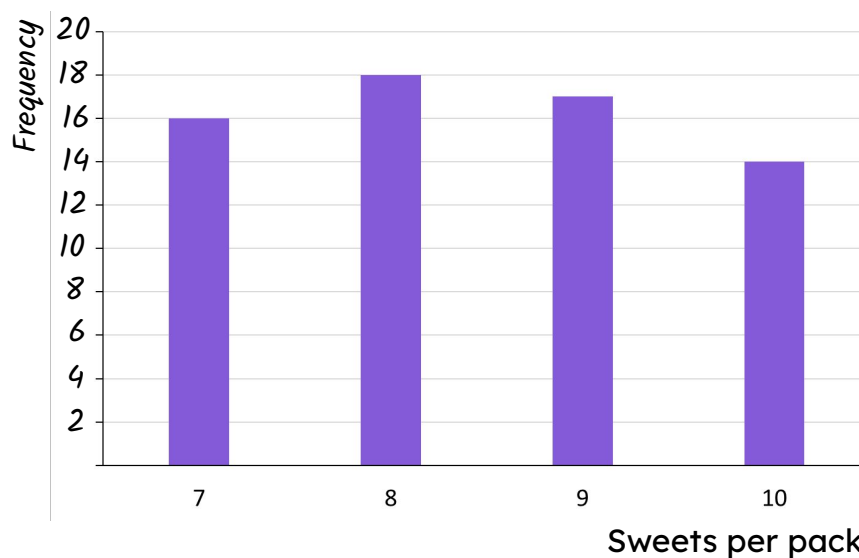

Task A: Constructing and interpreting bar charts

1) Complete the vertical scale.

2) Complete the frequency table and bar chart.

sweets per pack	frequency
7	16
8	18
9	17
10	14

Task B: Using bar charts in a data investigation

1) Decide whether each data set should be ordered or not.

a) Colours of karate belts

Ordered as there is a ranking system.

b) Animals at a zoo

Not ordered

c) Types of pen

Not ordered

d) Movie genres

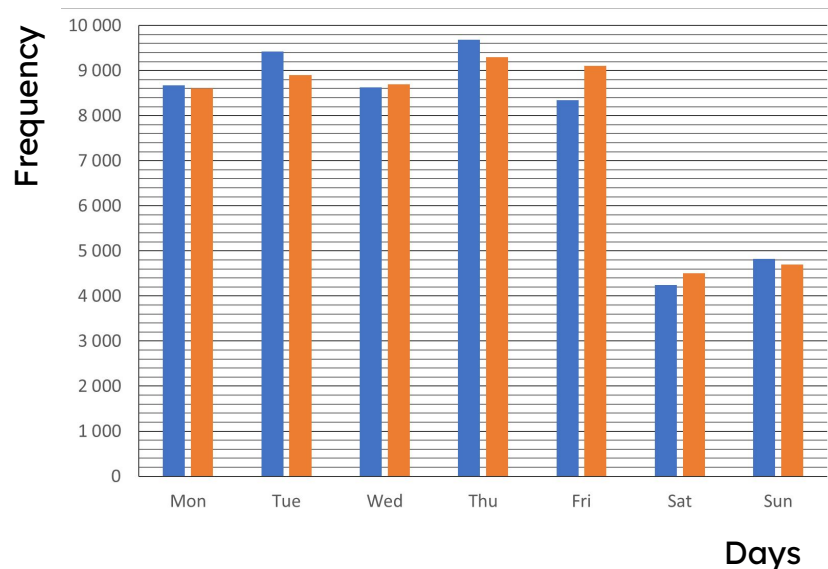

Not ordered

e) Clothing sizes

Ordered e.g. XS, S, M, L, XL, XXL

2) Jacob wants to see if there is any trend to his step count. He collects data over a two week period. Week one is displayed,

a) add week two to the bar chart.

Week 2	
Mon	8 600
Tue	8 900
Wed	8 700
Thu	9 300
Fri	9 100
Sat	4 500
Sun	4 700

b) What comments can you make regarding Jacob's daily step count? Justify your comments.

You may have responded with:

His daily step count is lower at the weekend. This may be because he isn't walking around a school building.

The daily step counts are similar between the two weeks, this may be due to him following the same timetable during the week and the same hobbies at the weekend.
