

Constructing bar charts by utilising technology

- 1 A template file is used to support the creation of multiple charts with similar formatting and style.
- 2 Microsoft Excel and Google Sheets are two examples of spreadsheet software.
- 3 Put the steps for chart creation in order. (Use numbers to show the correct order)

3	Click insert chart
1	Input data to the spreadsheet
4	Choose desired chart i.e. pie chart or bar chart
2	Select all the data to be included
5	Edit formatting as required

- 4 The frequency scale is auto generated by the software. Can it be changed? (Tick 1 correct answer)
 - ☒ Yes - nearly all of the parts of the bar chart can be changed using the editor.
 - ☐ No - it is auto generated and therefore fixed.
- 5 When data has been copied into the spreadsheet software, each piece of data needs to be in its own cell and the list needs to be vertical.
- 6 Where can you find the 'insert charts' button in Google Sheets or Microsoft Excel? (Tick 2 correct answers)
 - ☐ Under 'View' on the top ribbon
 - ☒ Under 'Insert' on the top ribbon
 - ☐ Under 'Data' on the top ribbon
 - ☒ On the shortcut bar
 - ☐ On the right click options
