

Checking and securing understanding of plotting coordinates

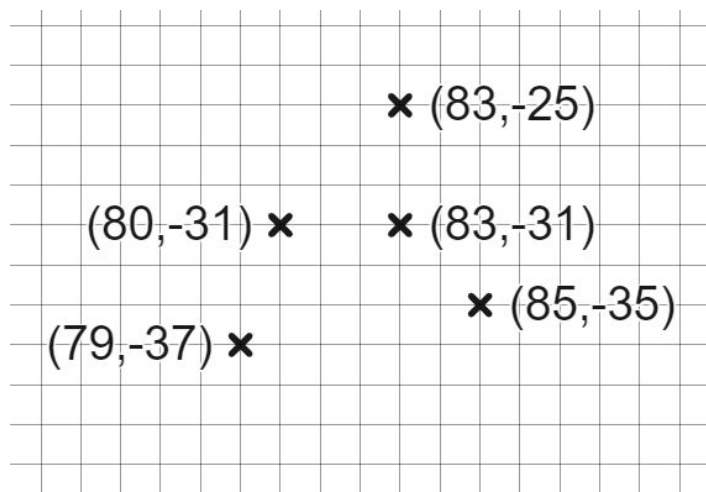

Task A: Plotting coordinates in all four quadrants

1) Plot the coordinates:

- $(5, 2)$
- $(1, -1)$
- $(-2, 3)$
- $(-3, -4)$

2) What are the missing coordinates?

Scale of 1 in the x-direction.

Scale of 2 in the y-direction.

3) Solve these axes scale problems.

a) If coordinate A is $(-6, 4)$ what are B and C?

B $(-12, 0)$

C $(-9, -8)$

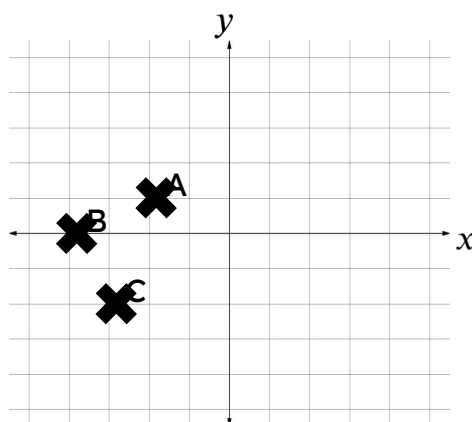

b) If coordinate C is $(-6, -40)$ what are A and B?

A $(-4, 20)$

B $(-8, 0)$

c) If coordinate B is $(-40, 0)$ what are A and C?

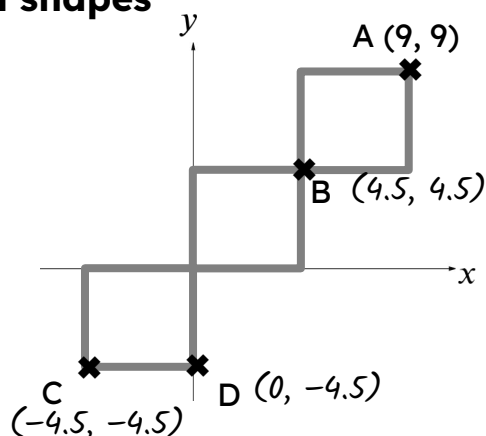

x coordinates of -30 and -20 but we don't know the scale on the y-axis.

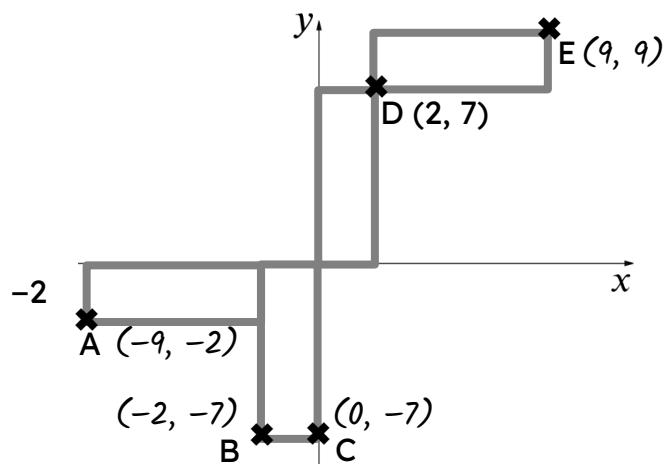

Task B: Coordinate problem solving with shapes

1) Find the missing coordinates.

a) Three identical squares.

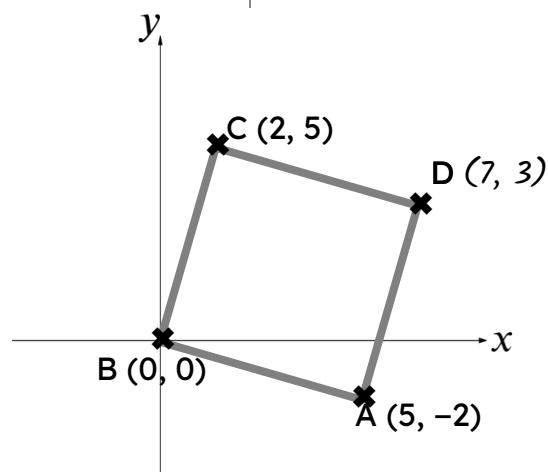

b) Three identical rectangles.

2) a) Find the missing coordinates of this square.

The +5 in the x -direction and -2 in the y -direction becomes +2 in the x -direction and +5 in the y -direction to find C.

This +2 in the x -direction and +5 in the y -direction is the same for A to D.

b) Find the missing coordinates of these identical rectangles.
