

Checking and securing understanding of plotting coordinates generated from a rule

Task A: Plotting arithmetic sequences

1) Find and plot the first five terms of these **arithmetic sequences**.

a) $4n - 10$

b) $10 - n$

Term number (n)	1	2	3	4	5
Term value (T)					

Term number (n)	1	2	3	4	5
Term value (T)					

2) Match the sequences to their graph.

$3n - 10$

$3n + 10$

$10 - 3n$

Task B: Plotting coordinates that follow a rule

1) Match the verbal rule to the simplified algebraic rule

$$y = x + 3$$

The x-coordinate multiplied by 5 subtracted from 3

$$y = 3x + 5$$

Add 3 to the x-coordinate

$$y = 5x - 3$$

The x-coordinate multiplied by 5 add 3

$$y = 5x + 3$$

The x-coordinate subtracted from 3

$$y = 3 - 5x$$

The x-coordinate multiplied by 5 subtract 3

$$y = 3 - x$$

The x-coordinate multiplied by 3 add 5

2) Complete the table of values and plot the rules:

a) $y = 2x - 5$

x	-2	-1	0	1	2	3	4
y		-7				1	

b) $y = 1 - x$

x	-2	-1	0	1	2	3	4
y			1		-1		

3) Jacob plots the rule $y = 5 - 3x$

Mark his work and give him feedback.

x	-2	-1	0	1	2	3
y	11	8	5	2	1	-4
