

Making a journey

1 _____ is the rate at which something is moving. (Tick **1** correct answer)

☐ distance

☐ speed

☐ time

2 Which formula is correct? (Tick **1** correct answer)

☐ distance = speed $\div$ time

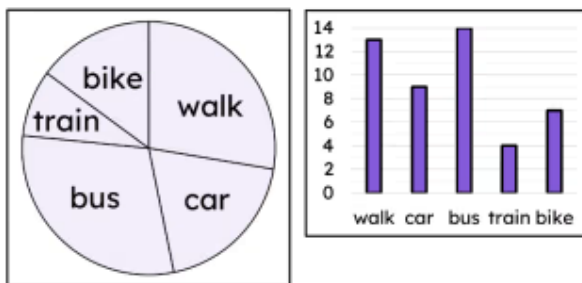

☐ distance = time $\div$ speed

☐ speed = distance $\div$ time

☐ speed = time $\div$ distance

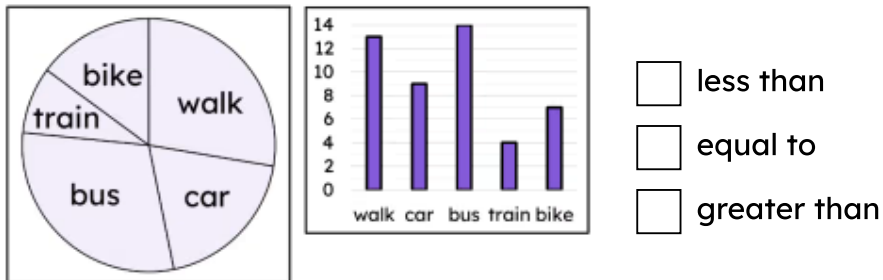

☐ time = speed $\div$ distance

3 The two diagrams represent the same dataset about the number of people that travel to work using each mode of transport. How many people travel by bike?

- 4 The two diagrams represent the same dataset about the number of people that travel to work using each mode of transport. The number of people who walk is _____ a quarter of the total frequency. (Tick **1** correct answer)

- 5 Aisha runs 6 km in 45 minutes. Her average speed was _____ km/h.
(Fill in the blank)

- 6 1 imperial gallon is approximately 4.546 litres. Starting with the smallest, sort the measurements in order of volume. (Use numbers to show the correct order)

	10 litres
	5 litres
	9 litres
	8 litres
	2 imperial gallons
	1 imperial gallon
	4 litres
