

Studying climate change

1 Which year in the graph shows the least amount of sea-ice?

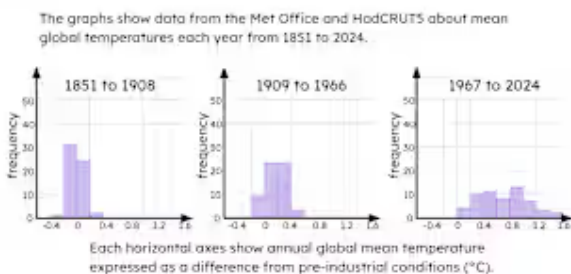

2 Look at the data displayed in the graph. Which is the modal class? (Tick **1** correct answer)

- ☐ -0.4°C to -0.2°C
- ☐ -0.2°C to 0°C
- ☐ 0°C to 0.2°C
- ☐ 0.2°C to 0.4°C
- ☐ 1.4°C to 1.6°C

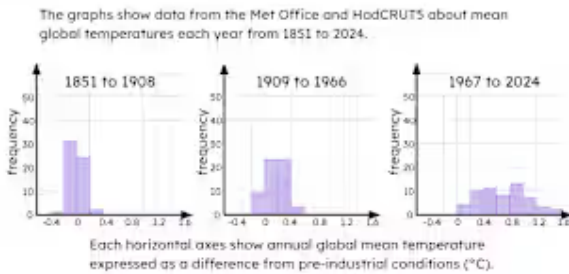

3 For each graph, calculate the modal class. Which time period has the modal class with the highest temperature? (Tick **1** correct answer)

- ☐ 1851 to 1908
- ☐ 1909 to 1966
- ☐ 1967 to 2024

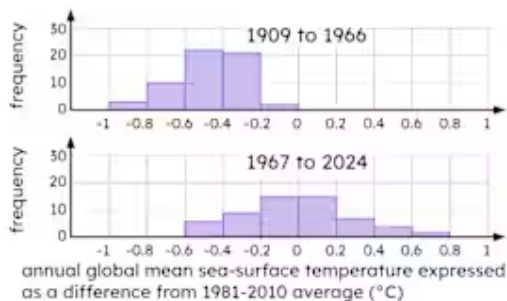

4 Which time period has the greatest range of data? (Tick 1 correct answer)

- ☐ 1851 to 1908
- ☐ 1909 to 1966
- ☐ 1967 to 2024

5 Which statement is true, based on the data represented in the graphs? (Tick 1 correct answer)

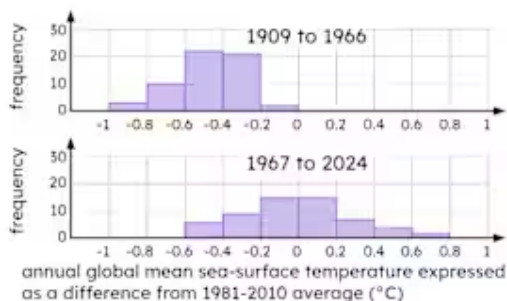

The graphs show data from the Met Office and HadSST4 about sea-surface temperatures for each year from 1851 to 2024.

- ☐ Sea-surface temperatures were generally colder for 1967-2024 than for 1909-1966.
- ☐ Sea-surface temperatures were generally the same for both periods of time.
- ☐ Sea-surface temperatures were generally warmer for 1967-2024 than for 1909-1966.

6 Which statement is true, based on the data represented in the graphs? (Tick 1 correct answer)

The graphs show data from the Met Office and HadSST4 about sea-surface temperatures for each year from 1851 to 2024.

- ☐ Sea-surface temperatures were less spread for 1967-2024 than for 1909-1966.
- ☐ Sea-surface temperatures had a similar spread in both periods of time.
- ☐ Sea-surface temperatures were more spread for 1967-2024 than for 1909-1966.
