

Personal assistant

Task A: Time

1) The PA needs to let a client know the earliest time a meeting can start.

They need to travel from station C to station G.

It will take 20 minutes to get from station G to the venue of the meeting.

What is the earliest time the meeting can start?

The first train doesn't stop at station C and the second train doesn't stop at station G.

They will need to catch the 0913 train from station C which gets to station G at 1010.

Therefore, the earliest time the meeting can start is 10:30 am.

2) You are a PA and are organising a morning of interviews. You may use the spreadsheet (below) to help you. Each candidate needs to do the following:

15 minute welcome.

A tour of the company, in pairs, which takes 30 minutes.

An interview, individually with the director, which takes 45 minutes.

A timed task, which can be split into multiple parts and takes 60 minutes.

A paired task, which takes 45 minutes.

A break of 15 minutes with one other candidate, no earlier than 10:30.

The director wants a 15 minute break after 2 interviews.

There are 4 candidates.

TIME	A	B	C	D
09:00	WELCOME			
09:15	I	T	TT	T
09:30		TT		
09:45				TT
10:00	T	I	T	TT
10:15				
10:30	B		B	
10:45	TT	B	TT	B
11:00		PT	I	PT

TIME	A	B	C	D
11:15	TT	PT	I	PT
11:30				
11:45		TT	PT	I
12:00	PT			
12:15				
12:30	Farewell			
12:45				
13:00				

Here is an example:

Key
I = interview
T = tour
TT = timed task
PT = paired task
B = break

Task B: Finance

1) A personal assistant needs to book accommodation for a 3 night stay.

Which hotel should they choose?

KIP HERE
£105 pn

GET YOUR HEAD DOWN
£118 pn
10% discount if you stay
more than two nights

A STAY AWAY
£115 pn
10% discount on your
second night
15% discount on your
third night

KIP HERE

Total cost

$$= £105 \times 3$$

$$= £315$$

GET YOUR HEAD DOWN

Total cost

$$= 0.9 \times (£118 \times 3)$$

$$= £318.60$$

A STAY AWAY

Total cost

$$= £115 + 0.9 \times £115 + 0.85 \times £115$$

$$= £316.25$$

2) Calculate the difference in cost of travelling by car and train/taxis.

Mileage for car use = 45 p per mile

Mileage cost for taxis = £2.70

The distance between Exeter to Birmingham is 169 miles.

Return train ticket £108

Miles travelled in taxis = 16 miles

$$\text{Using a car} = 338 \times 0.45 = £152.10$$

$$\text{Train and taxis} = 108 + 16 \times 2.70 = £151.20$$

Using a train/taxi is cheaper by 90 pence.
