

Event management

Task A: Maths skills in event planning

1) The cost of hiring a venue is £45 per hour.

Calculate the cost of hiring a venue for the following time periods:

a) 2 pm to 5 pm $3 \times £45 = £135$

b) 8:30 am to 4:30 pm $8 \times £45 = £360$

c) 7:45 am to 6:00 pm $11 \times £45 = £495$

2) To make your event more comfortable for people you decide to use the ratio of 1 : 75 for the toilets to people. The cost of hiring a toilet is £120.

Calculate the cost of hiring toilets for the following numbers of people:

a) 1500 people $1500 \div 75 = 20$ $20 \times £120 = £2400$

b) 3200 people $3200 \div 75 = 42.666...$ $43 \times £120 = £5160$

c) 400 people $400 \div 75 = 5.333...$ $6 \times £120 = £720$

3) Calculate the cost of trophies and medals for the following:

a) 7 teams of 8 players

$$2 \times £12.50 + 16 \times £5.50 + 40 \times £1 = £153$$

b) 12 teams of 12 players

$$2 \times £12.50 + 24 \times £5.50 + 120 \times £1 = £277$$

c) 10 teams of 15 players

$$2 \times £12.50 + 30 \times £5.50 + 120 \times £1 = £310$$

Award	Cost per item
Team trophy for 1 st two teams	£12.50
Trophy for winners and runners up	£5.50
Participation medal	£1

d) Using your answers to the previous questions calculate the average ticket price if the profit needs to be at least £1000.

7:45 am to 6:00 pm with a 20% discount as it is a charity event.

10 teams of 15 players

400 attendees *Total income needs to be* $= £(396 + 720 + 310) + £1000 = £2426$

Average ticket price $= £2426 \div 400 = £6.07$

We can now decide what tickets should cost more and which cost less.

Task B: Planning your own event

1) Plan your own event.

Choose from the following:

- A charity tournament making at least £500 for your favourite charity. What should the cost per ticket be?
- A non-profit event, a child's birthday party with a budget of £800. How many children can be invited?
- A music concert in which you need to make a profit of 20%.
- Or something of your own choice.

You can use the internet to research costs of venues, catering, etc in your area. Or use the ones provided in this lesson.

E.g. Planning an obstacle course birthday party for group of children.

Gold level package - £28.50 per child

Party bag with medal, wrist band and pencil - £6.99 per child

Pizza - 1 large pizza at £25.99 each (1 large per 2 children). 45% party discount and free delivery.

Cost for two children = 85.2745 (unrounded value at this stage)

Budget = £800

$800 \div 85.2745 = 9.381...$ so nine pairs of children can be invited.

18 children can be invited to the party. Party cost total = £767.47
