

Checking understanding of the mean

1 The (arithmetic) mean for a set of numerical data is the sum of the values divided by the number of values. It is a measure of central tendency representing the average of the data. Fill in the blank

2 Which of these towers of blocks have a mean of 4? Tick 2 correct answers

☐

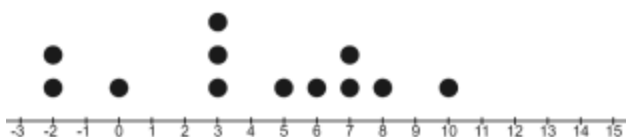

☒

☒

☐

3 The mean for this data set: 5, 4, 7, 5, 8, 2, 9, 3, 5, 2 is 5 Fill in the blank

4 What is the mean of the data shown on this dot plot? 4 Fill in the blank

- 5 Match each total with the number of data values and mean. Write the correct letter in each box

a	Total = 240
b	Total = 350
c	Total = 150
d	Total = 220
e	Total = 180

<i>d</i>	11 data values, mean of 20
<i>b</i>	50 data values, mean of 7
<i>c</i>	15 data values, mean of 10
<i>e</i>	30 data values, mean of 6
<i>a</i>	12 data values, mean of 20

- 6 A large data set has 620 pieces of data and a total of 3906. The mean of the data set is 6.3. Fill in the blank
