Evaluating the range

1 Which of these sentences best describe what an outlier is. Tick **2** correct answers

- ☐ An outlier is always the largest value in a data set.
- ☐ An outlier is extremely large or small compared to the rest of the data set.
- ☐ An outlier is an extremely large or small value after a range is calculated.
- ☐ Outliers lie close to all the other data points in a data set.
- ☐ Outliers lie far away from where the majority of the data points are clustered.

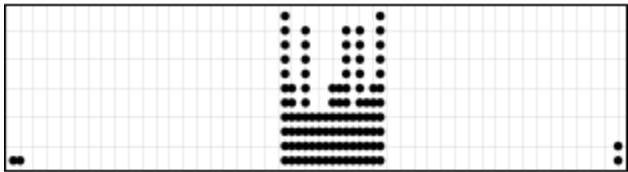

2 What is the value of the outlier on this dot plot? Tick **1** correct answer

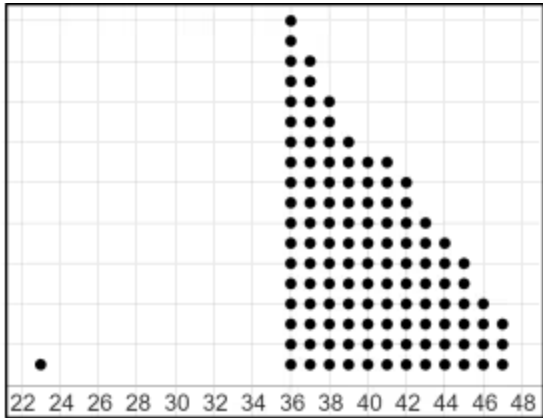

- ☐ 23
- ☐ 35
- ☐ 62
- ☐ 62.5
- ☐ 63

3 How many outliers are there on this dot plot? Fill in the blank

4 Match each piece of information to its value. Write the correct letter in each box

a	The outlier		24
b	The range with the outlier		23
c	The range without the outlier		11
d	The largest data point		47

- 5 For this ordered data set, calculate the range whilst including all outliers, and also calculate the range without the outliers. The difference between the two ranges is _____ Fill in the blank

4	5	34	34	34	34	35	35	35
36	36	36	37	37	37	37	37	37
38	39	39	39	39	40	40	40	40
41	41	41	41	41	41	41	43	96

- 6 Different outliers may need to be: kept, removed, investigated further, depending on the context with which these outliers have occurred. Match what should happen to the outlier to its context. Write the correct letter in each box

a	Definitely keep
b	Definitely remove
c	Investigate further

	A student walked 200 km to the supermarket.
	19 cats had a mass of 4 - 6 kg. Outlier had a mass of 11 kg.
	An outlier of 28 for number of days in a month without rain.
